C. 25.2 search local face database by graph.....	233
C. 25.3 face detection in pictures.....	234
Appendix D others.....	235
D. 1 nation.....	235

1. summary

This document is mainly used for HTTP docking of face recognition all-in-one machine, and is applicable to system development and maintenance personnel.

2. Interface principle

This data interface specification adopts standard HTTP protocol for communication, and the requirements are as follows:

2.1 request method

The request method uses the post method, and the data sent and uploaded is placed in the entity body.

2.2 data type and format

2.2.1 all strings shall be encoded in UTF-8 character set.

2.2.2 the data exchanged by both parties shall be packaged in JSON format. The basic format is as follows:

```
{
  "operator": "<Operator>",
  "info": {<Info>},
  .....
}
```

For more details, please check [3. Specific function interface](#) The specific data format of each interface.

2.2.3 Base64 encoding or image URI is used for all image data.

2.2.4 content length must be included in the header of all HTTP interactions. Pay attention to case sensitivity.

Grammar

Request URI format: http: / / < server IPADDR > / action / < operator >. Where < server IPADDR >: IP address of the requested all-in-one

face recognition machine; < operator >: operation content, please check [3. Specific function interface](#).

2.4 identity authentication

In order to ensure the security of data transmission, the basic mode is used temporarily for authentication when the data is formally transmitted. The typical data of the authorization header is "authorization: basic jdhahy0 =", where basic represents basic authentication, and jdhahy0 = is the base64 encoded "user: passwd" string. For example, if the user name of the all-in-one machine is "admin" and the password is "admin", then the base64 code of "admin: admin" in the header of sending data is "ywertaw46ywertaw4 =", and the authentication of sending data ID card is as follows:

```
1 POST /action/AddPerson HTTP/1.1
2 Host: 172.168.2.96
3 Authorization: Basic YWRTaw46YWRtaW4=
4 Content-Type: text/plain
5
6 {
7   "operator": "AddPerson",
8   "info": {
9     "DeviceID": "1305433",
10    "PersonType": 0,
11    "Name": "张三",
12    "Gender": 0,
13    "Nation": 0,
14    "CardType": 0,
15    "IdCard": "430923199011044411",
16    "Birthday": "1990-11-04",
17    "Telnum": "18888888888",
18    "Native": "广东",
19    "Address": "深圳宝安",
20    "Notes": "备注",
21    "MjCardFrom": 2,
22    "WiegandType": 7,
```

If postman is used as an example to debug the interface, select basic auth under authorization, enter the user name and password, and click update request. Postman will automatically encrypt the user name and password to the headers, as shown in the following figure:

The screenshot shows a REST client interface with a 'New Tab' button and a '+', 'No environment' dropdown, and a 'Send' button. The request method is 'POST' and the URL is 'Enter request URL'. The 'Params' tab is selected. The 'Authorization' tab is active, showing 'Basic Auth' selected. The 'Username' field contains 'admin' and the 'Password' field contains '.....'. There are checkboxes for 'Save helper data to request' and 'Show Password'. A 'Generate Code' button is visible on the right.

After setting, select post request mode, input the URL of corresponding function interface, and click send.

3. Specific function interface

3.1 sound settings

Gets or sets parameters for system audio settings.

Parameter information (Note: optional is optional)

Key	Type	Values	Description
operator	char	GetSound or SetSound	GetSound:Gets the parameters of the audio settings SetSound: Setting audio data parameters
info	json object		concrete content
VerifySuccAudio	int (optional)	0~1	Whether the authentication is successful or not 0: No broadcasting 1: Broadcast
VerifyFailAudio	int (optional)	0~1	If authentication fails, is voice broadcast

			0: No broadcasting 1: Broadcast
RemoteCtrlAudio	int (optional)	0~1	Remote control of sound playback 0:Non remote 1:Remote playback
Volume	int (optional)	5 ~ 100 Increase every 5 values	Volume value
VerifySuccGuiTip	int (optional)	0~1	Is the authentication successful interface prompted 0: No hint 1: Tips
VerifyFailGuiTip	int (optional)	0~1	Is the authentication failure interface prompted 0: No hint 1: Tips
UnregisteredGuiTip	int (optional)	0~1	List not registered interface prompt 0: No hint 1: Tips
IPHide	int (optional)	0~1	Is the interface IP hidden 0: Don't hide it 1: hide
IsShowName	int (optional)	0~2	If the comparison is successful, is the name prompt displayed 0: Do not show 1: display 2: Partial display (hide back part)
IsShowTitle	int (optional)	0~1	Display (discard) screen Title prompt 0: Do not show (default) 1: display

IsShowVersion	int (optional)	0~1	Display the interface version number prompt (discard) 0: Do not show (default) 1: display
IsShowDate	int (optional)	0~1	Discard date 0: Do not show 1: display
IDCardNumHide	int (optional)	0~1	Whether the interface card number is hidden (built-in card reader) 0: Don't hide it 1: hide
ICCardNumHide	int (optional)	0~1	Whether the IC card number of the interface is hidden (except for the built-in card reader) 0: Don't hide it 1: hide
DisplayPicture	int (optional)	0~1	Image displayed after comparison 0: Capture images 1: Registration image
IsShowDeviceID	int (optional)	0~1	Display native ID 0: Do not show 1: display
IsShowPersonNum	int (optional)	0~1	Displays the number of registered lists 0: Do not show 1: display
VerifyTipContent	String (optional)	custom	UI text prompt for successful authentication (the length is less than 32 bytes, which

			cannot be too long, otherwise the UI display is incomplete) Default: please pass
UnregisterTipContent	String (optional)	custom	UI text prompt is not registered in the list (the length is less than 32 bytes, otherwise the UI display is incomplete) Default: stranger
BlacklistTipContent	String (optional)	custom	UI text prompt of authentication failure (the length is less than 32 bytes, otherwise the UI display is incomplete) Default: no access

3.1.1 obtaining audio setting parameters

Operator: GetSound

URI: <http://<server ipaddr>/action/GetSound>

e. g. ,

<http://172.168.2.10/action/GetSound>

Reply to body:

```
{
  "operator": "GetSound",
  "info": {
    "VerifySuccAudio": 1,
    "VerifyFailAudio": 1,
    "RemoteCtrlAudio": 0,
    "Volume": 80,
    "VerifySuccGuiTip": 1,
    "VerifyFailGuiTip": 1,
    "UnregisteredGuiTip": 1,
    "IPHide": 0,
```

```

    "IsShowName": 1,
    "DisplayPicture": 0,
    "IsShowTitle": 0,
    "IsShowVersion": 0,
    "IsShowDate": 1,
    "IsShowTime": 1,
    "ICCardNumHide": 0,
    "Verifytipcontent": "please pass",
    "Unregistertipcontent": "stranger,",
    "Blacklisttipcontent": "no access"

  }
}

```

3.1.2 setting audio parameters

Operator: **SetSound**

URI: **http://<server ipaddr>/action/SetSound**

e. g. ,

http://172.168.2.10/action/SetSound

Issue body:

```

{
  "operator": "SetSound",
  "info":
  {
    "VerifySuccAudio":1,
    "VerifyFailAudio":1,
    "RemoteCtrlAudio":1,
    "Volume":50,
    "VerifySuccGuiTip":1,
    "VerifyFailGuiTip":1,
    "UnregisteredGuiTip":1,
    "IPHide": 0,
    "IsShowName": 1,
    "DisplayPicture": 0,
    "ICCardNumHide": 0,
    "Verifytipcontent": "please pass",
    "Unregistertipcontent": "stranger,",
    "Blacklisttipcontent": "no access"
  }
}

```

```
}  
}
```

3.1.3 get the number and file name of playing files

Parameter information:

Key	Type	Values	Description
operator	char	GetAudio	SetAudio:Get a playable audio file
info	json object		concrete content
AudioNum	int		Number of audio files
AudioName	json array		A collection of single or multiple audio file names in the format of a JSON array of audio file names

Operator: **GetAudio**

URI: **http://<server ipaddr>/action/GetAudio**

e. g. ,

http://172.168.2.10/action/GetAudio

Reply to body:

```
{  
  "operator": "GetAudio",  
  "info": {  
    "AudioNum": 1,  
    "AudioName": [  
      "welcome.wav",...  
    ]  
  }  
}
```

3.1.4 play specified file sound

Parameter information (Note: optional is optional)

Key	Type	Values	Description
operator	char	SetAudio	SetAudio:Set to play the specified audio file
info	json object		concrete content
DeviceID	int		Device ID
AudioType	int	0~1	Type of playback file 0:Play machine local files 1:Play custom file
AudioName	char (optional)		Name of audio file to be played (must be wav file, sampling rate: 16000hz, sampling bits: 16 bits, mono. 64 byte file name)

Operator: **SetAudio**

URI: **http://<server ipaddr>/action/SetAudio**

e. g. ,

http://172.168.2.10/action/SetAudio

Issue body:

```
{
  "operator": "SetAudio",
  "info": {
    "DeviceID":1300001,
    "AudioType":0,
    "AudioName":"welcome.wav"
  }
}
```

3.2 door opening conditions

Gets or sets the door opening condition parameters.

Parameter information (Note: optional is optional)

Key	Type	Values	Description
operator	char	GetDoorCondition or SetDoorCondition	GetDoorCondition: Get door opening condition setting parameters SetDoorCondition: Setting door opening condition parameters
info	json object		concrete content
FaceThreshold	int (optional)	50 ~ 100	Black and white list comparison threshold
IDCardThreshold	int (optional)	50 ~ 100	Threshold comparison ID card
OpendoorWay	int (optional)	0~3	0:Face opening mode, 1:Remote door opening mode, 2:Remote door opening or face mode 3:Face verification + remote door opening mode
VerifyMode	int (optional)	1: General neutral machine: 1 ~ 4 or 21 ~ 26 2: Mask or temperature measuring machine: whether mask detection or temperature detection or () operation based door opening	Basic door opening verification mode. (the following base types are decimal) 1: Whitelist verification 2: ID card verification 3: White list + ID card 4: White list or ID card 5:Single mask or body

		<p>verification method is required.</p> <p>Support mask detection or () operation, and 0x100 indicates mask detection and verification;</p> <p>Support temperature detection or () operation, and 0x200 indicates that it has temperature detection verification;</p> <p>Support mask + body temperature detection or () operation, and 0x300 indicates that it has mask + body temperature detection verification;</p> <p>For example:</p> <p>1: Ordinary neutral machine</p> <p>1) Whitelist verification: 1</p> <p>2) Wegenka + whitelist verification: 25</p> <p>2: Mask or temperature measuring machine</p>	<p>temperature or separate mask + body temperature</p> <p>21:RF card verification (built-in swipe card model)</p> <p>22:RF card verification + whitelist Verification (built-in swipe card model)</p> <p>23:RF card verification or whitelist verification (built-in swipe card model)</p> <p>24:Wegenka verification</p> <p>25:Wegenka + whitelist verification</p> <p>26:Wegenka or whitelist verification</p>
--	--	--	--

		1) Single pass mask 2) Mask + whitelist verification (0x101 = 0x100 & 1 = 257) 3) Individual body temperature pass (0x205 = 0x200 & 5 = 517) 4) Body temperature + whitelist verification (0x201 = 0x200 & 1 = 513) 5) Single mask + body temperature (0x305 = 0x300 & 5 = 773) 6) Mask + body temperature + Wigan swipe card + whitelist verification (0x319 = 0x300 & 25 = 793)	
VerifyResetTime	int (optional)	1~10	Verify reset time (seconds) The UI displays the prompt information and the time that the same person does not recognize again during the reset time
Wiegand	int (optional)	0~1	The type of Wigan agreement. 0: 26 1: 34

			4:26 bits (8 + 16): facility code + userid (equipment code + card number); 5:34 bits (8 + 24); 6:The number of digits to be filled in is 26 (16); 7:34 digits (8 + 24 to be filled in separately);
PublicMjCardNo	unsigned int (optional)		Public access card number
AutoMjCardBgnNo	unsigned int (optional)		Automatically generate the start card number of the access control card number
AutoMjCardEndNo	unsigned int (optional)		Automatically generate the end card number of access control card number
ControlType	int (optional)	0~2	Control door opening interface mode. 0:Wigan interface 1:Switching value 2: Wigan interface + switching value
IOType	int (optional)	0~1	Open the door when controlling the opening interface mode. 0:close 1:to break off
IOStayTime	int (optional)		Holding time (MS)
Endian	int (optional)	0~1	Card reading mode 0:Big end mode 1:Small end mode

CardMode	int (optional)	0~1	Card number mode 0:decimal system 1:hexadecimal
IsOutFF	int (optional)	0~1	Stranger Wigan outputs 8 F's (Wigan opens the door) 0: No output 1: output
SnapResetTime	int (optional)	0-15 (default 0)	Identification interval time (s): identify the next person by comparing the waiting time after passing the comparison

3.2.1 obtain the setting parameters of door opening conditions

Operator: `GetDoorCondition`

URI: `http://<server ipaddr>/action/GetDoorCondition`

e. g. ,

`http://172.168.2.10/action/GetDoorCondition`

Reply to body:

3.2.1.1. The opening interface mode is switch value:

```
{
  "operator": "GetDoorCondition",
  "info": {
    "FaceThreshold": 80,
    "IDCardThreshold": 50,
    "VerifyResetTime": 2,
    "OpendoorWay": 0,
    "VerifyMode": 1,
    "ControlType": 1,
    "IOType": 0,
    "IOStayTime": 6,
    "Endian": 0,
```

```

    "CardMode": 0,
    "SnapResetTime": 0
}

```

1. 1. 1. 2. 1. 1. 2. 1. 2. 1. 2. 1. 1. 2. 1. 1. 2. 1. 2. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1.

```
{
  "operator": "GetDoorCondition",
  "info": {
    "FaceThreshold": 80,
    "IDCardThreshold": 50,
    "VerifyResetTime": 2,
    "OpendoorWay": 0,
    "VerifyMode": 1,
    "Wiegand": 0,
    "ControlType": 0,
    "PublicMjCardNo": 2,
    "AutoMjCardBgnNo": 2,
    "AutoMjCardEndNo": 4,
    "IOStayTime": 6,
    "Endian": 0,
    "CardMode": 0
  }
}
```

3.2.1.2. The opening interface mode is Wigan interface + switch value:

```
{
  "operator": "GetDoorCondition",
  "info": {
    "FaceThreshold": 80,
    "IDCardThreshold": 50,
    "OpendoorWay": 0,
    "VerifyMode": 1,
    "Wiegand": 0,
    "ControlType": 0,
  }
}
```

```
        "PublicMjCardNo": 2,  
        "AutoMjCardBgnNo": 2,  
        "AutoMjCardEndNo": 4,  
        "IOStayTime": 6,  
        "Endian": 0,  
        "CardMode": 0  
    }  
}
```

3.2.2 setting door opening condition parameters

Operator: **SetDoorCondition**

URI: **http://<server ipaddr>/action/SetDoorCondition**

e. g. ,

http://172.168.2.68/action/SetDoorCondition

Issue body:

3.2.2.1. The opening interface mode is switch value:

```
{  
    "operator": "SetDoorCondition",  
    "info": {  
        "FaceThreshold": 90,  
        "IDCardThreshold": 50,  
        "OpendoorWay": 0,  
        "VerifyMode": 1,  
        "ControlType": 1,  
        "IOType": 0,  
        "IOStayTime": 200,  
        "Endian": 0,  
        "CardMode": 1,  
        "SnapResetTime": 0  
    }  
}
```

3.2.2.2.2. The door opening interface mode is Wigan interface:

```
{
  "operator": "SetDoorCondition",
  "info": {
    "FaceThreshold": 90,
    "IDCardThreshold": 50,
    "OpendoorWay": 0,
    "VerifyMode": 1,
    "ControlType": 0,
    "Wiegand": 0,
    "PublicMjCardNo": 2,
    "AutoMjCardBgnNo": 2,
    "AutoMjCardEndNo": 4,
    "IOStayTime": 200,
    "Endian": 0,
    "CardMode": 1
  }
}
```

3.2.2.3. The mode of door opening interface is Wigan interface + switch value:

```
{
  "operator": "SetDoorCondition",
  "info": {
    "FaceThreshold": 90,
    "IDCardThreshold": 50,
    "OpendoorWay": 0,
    "VerifyMode": 1,
    "ControlType": 0,
    "Wiegand": 0,
    "PublicMjCardNo": 2,
    "AutoMjCardBgnNo": 2,
    "AutoMjCardEndNo": 4,
    "IOStayTime": 200,
    "Endian": 0,
    "CardMode": 1
  }
}
```

```
}  
}
```

3.2.3 introduction of door opening mode

At present, the following face recognition modes are supported: Face opening mode, remote door opening mode, remote door opening or face opening mode, face verification + remote door opening mode.

0: face opening mode: face recognition integrated opportunity to push the stranger snapshot information and authentication comparison information, and directly execute the door opening and UI prompt information after the comparison. In this mode, calling the remote door opening command will be invalid.

1: This method is used for remote comparison of door opening information, which can be used for remote comparison of door opening information, remote capture of door opening information, remote capture of door opening information, remote capture of door opening mode information.

2: Remote door opening or face mode: face recognition integration can push the stranger snapshot information and authentication comparison information, and directly execute the door opening and UI prompt information after the comparison. In this mode, the remote door opening command can be called.

3: Face verification + remote door opening mode: the face recognition integration opportunity pushes the stranger snapshot information and authentication comparison information. If the comparison is passed, the door opening and UI information prompts will not be executed directly. The door opening information and UI prompt need to be attached with the opening information and UI prompt in the reply to the received authentication push data package. This mode requires HTTP to be set in the mode of offline and continuous transmission, and the authentication subscription is enabled. In this case, if you receive the confirmation information from the JSON open-door platform, you will directly send the confirmation message to the JSON open-door authentication platform (if you do not need to send the confirmation message to the JSON open-door authentication platform), if you do not need to send the confirmation message to the HTTP open-door authentication platform, you need to send the confirmation message directly to the JSON open-door authentication platform. In this mode, it is necessary to exclude whether the authentication data pushed is the authentication comparison data of network disconnection and continuous transmission. If it is the authentication data of network disconnection and remote door opening, the

returned data packet does not need to perform the opening action again.

Face verification + remote door opening method is adopted to reply the information confirmation package received from authentication subscription when the network is disconnected for continuous transmission

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|----------------------|------------------------------------|---|
| code | int | 200 | Required field in continuous transmission mode |
| desc | char | OK | Required field in continuous transmission mode |
| openDoor | int
(optional) | 0~1 | Door opening action
0: don't open the door
1: Open the door |
| showInfo | String
(optional) | 64 bytes
(including terminator) | UI prompt information |

e. G., reply to need to open the door + UI prompt message

```
{
"code": 200,
"desc": "OK",
"openDoor": 1,
"Showinfo": "XX please pass"
}
```

e. G., reply no need to open the door + UI prompt message

```
{
"code": 200,
"desc": "OK",
"openDoor": 0,
"Showinfo": "XX has no permission to pass"
}
```

3.3 setting user name and password

Set the user name and password of the all-in-one face recognition machine.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|------------|---|
| operator | char | SetUserPwd | Set the user name and password of the face recognition all in one machine |
| info | json object | | concrete content |
| User | char | User name | User name, maximum length 64 characters (including terminator) |
| Pwd | char | Password | Password, maximum length 64 characters (including terminator) |

Operator: SetUserPwd

URI:http://<server ipaddr>/action/SetUserPwd

e. g. ,

http://<server ipaddr>/action/SetUserPwd

Issue body

```
{
  "operator": "SetUserPwd",
  "info": {
    "User": "admin",
    "Pwd": "admin"
  }
}
```

3.4 network parameters

Gets or sets network parameters. In the process of setting network

parameters, the machine will restart after changing IP and other behaviors. At the same time, the setting result will not be returned at present. Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|--------------------|----------------------------------|--|
| operator | char | GetNetParam
or
SetNetParam | GetNetParam: Get network parameters
SetNetParam: Setting network parameters |
| info | json object | | concrete content |
| IPAddr | char
(optional) | | Device IP address (up to 64 bytes) |
| Submask | char
(optional) | | Device IP subnet mask (up to 32 bytes) |
| Gateway | char
(optional) | | Device IP gateway (up to 32 bytes) |
| ListenPort | int
(optional) | | Data service port |
| WebPort | int
(optional) | | Web Service |
| DHCP | int
(optional) | 0~1 | DHCP (only supported by Hisilicon)
0: not enabled (not enabled by default)
1: Enable (when enabling, it is recommended that the UI interface should not hide IP) |
| DefRoute | int
(optional) | 0~1 | Default routing (WiFi / 4G version specific)
0: wired routing
1: WiFi routing
2: 4G routing |

3.4.1 obtaining network parameters

Operator: **GetNetParam**

URI: **http://<server ipaddr>/action/GetNetParam**

e. g. ,

http://192.168.2.10/action/GetNetParam

Reply body

```
{
  "operator": "GetNetParam",
  "info": {
    "IPAddr": "192.168.2.10",
    "Submask": "255.255.255.0",
    "Gateway": "192.168.2.1",
    "ListenPort": 5000,
    "WebPort": 80
  }
}
```

3.4.2 setting network parameters

Operator: **SetNetParam**

URI: **http://<server ipaddr>/action/SetNetParam**

e. g. ,

http://192.168.2.10/action/SetNetParam

Issued body

```
{
  "operator": "SetNetParam",
  "info": {
    "IPAddr": "192.168.2.10",
    "Submask": "255.255.255.0",
    "Gateway": "192.168.2.1",
    "ListenPort": 5000,
  }
}
```

```

    "WebPort": 80
  }
}

```

3.5 time parameters

Gets or sets the time parameter.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------------------------------|--------------------------------|--|
| operator | char | GetSysTime
or
SetSysTime | GetSysTime: Get time
parameters
SetSysTime: Setting
time parameters |
| info | Json object | | concrete content |
| Year | unsigned short
(optional) | 1900~ | year |
| Month | unsigned short
(optional) | 1~12 | month |
| Day | unsigned short
(optional) | 1~31 | day |
| Hour | unsigned short
(optional) | 0~23 | Hour |
| Minute | unsigned short
(optional) | 0~59 | branch |
| Second | unsigned short
(optional) | 0~59 | second |

3.5.1 obtaining system time

Operator: GetSysTime

URI: <http://<server ipaddr>/action/GetSysTime>

e. g. ,

<http://192.168.2.10/action/GetSysTime>

Reply to body

```
{
  "operator": "GetSysTime",
  "info": {
    "Year": 2018,
    "Month": 3,
    "Day": 25,
    "Hour": 20,
    "Minute": 30,
    "Second": 50
  }
}
```

3.5.2 setting system time

Operator: **SetSysTime**

URI: **http://<server ipaddr>/action/SetSysTime**

e. g. ,

http://192.168.2.10/action/SetSysTime

Issue body

```
{
  "operator": "SetSysTime",
  "info": {
    "Year": 2018,
    "Month": 3,
    "Day": 25,
    "Hour": 20,
    "Minute": 30,
    "Second": 50
  }
}
```

3.6 NTP parameters

Gets or sets the NTP parameter.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-------------|--------------------|------------------------------|---|
| operator | char | GetSysNTP
or
SetSysNTP | GetSysNTP: Get NTP parameters
SetSysNTP: Setting NTP parameters |
| info | json object | | concrete content |
| NtpEnable | int
(optional) | 0~1 | Whether to enable NTP timing
0: Not enabled
1: Enable |
| NtpUrl | char
(optional) | | NTP server IP address (up to 64 bytes) |
| NtpPort | int
(optional) | | NTP server port |
| NtpTimeZone | int
(optional) | 1~30 | time zone
1: (gmt-12:00) west of the Japanese border
2: (gmt-11:00) midway, Samoa
3: (gmt-10:00) Hawaii
4: (gmt-09:00) Alaska
5: (gmt-08:00) Pacific time (USA and Canada)
6: (gmt-07:00) mountain time (USA and Canada)
7: (gmt-06:00) Central time (USA and Canada)
8: (gmt-05:00) Eastern time (USA and Canada)
9: (gmt-04:00) Atlantic time (Canada)
10: (gmt-03:30) Newfoundland
11: (gmt-03:00) Georgetown, Brasilia |

| | | |
|--|--|---|
| | | 12: (gmt-02:00) Mid Atlantic
13: (gmt-01:00) Cape Verde, Azores
14: (GMT + 00:00) Dublin, Edinburgh, London
15: (GMT + 01:00) Amsterdam, Berlin, Rome, Paris
16: (GMT + 02:00) Athens, Jerusalem, Istanbul
17: (GMT + 03:00) Bagdad, Kuwait, Moscow
18: (GMT + 03:30) Teheran
19: (GMT + 04:00) Caucasus standard time
20: (GMT + 04:30) Kabul
21: (GMT + 05:00) Islamabad, Karachi, Tashkent
22: (GMT + 05:30) Madras, Mumbai, New Delhi
23: (GMT + 06:00) Almaty, Novosibirsk, Dhaka
24: (GMT + 07:00) Bangkok, Hanoi, Jakarta
25: (GMT + 08:00) Beijing, Urumqi, Singapore
26: (GMT + 09:00) Seoul, Tokyo, Osaka, Sapporo
27: (GMT + 09:30) Adelaide, Darwin
28: (GMT + 10:00) Melbourne, Sydney, Canberra
29: (GMT + 11:00) Magadan, Solomon Islands
30: (GMT + 12:00) Auckland, Wellington |
|--|--|---|

| | | | |
|-------------|--------------|--|---|
| NtpInterval | unsigned int | | NTP calibration interval,
unit: hour |
|-------------|--------------|--|---|

3.5.1 obtaining NTP parameters

Operator: **GetSysNTP**

URI: **http://<server ipaddr>/action/GetSysNTP**

e. g. ,

http://192.168.2.10/action/GetSysNTP

Reply to body

```
{
  "operator": "GetSysNTP",
  "info": {
    "NtpEnable": 0,
    "NtpUrl": "time.windows.com",
    "NtpPort": 123,
    "NtpTimeZone": 25,
    "NtpInterval": 1
  }
}
```

3.5.2 setting NTP parameters

Operator: **SetSysNTP**

URI: **http://<server ipaddr>/action SetSysNTP**

e. g. ,

http://192.168.2.10/action/SetSysNTP

Issue body

```
{
  "operator": "SetSysNTP",
  "info": {
```

```

        "NtpEnable": 0,
        "NtpUrl": "time.windows.com",
        "NtpPort": 123,
        "NtpTimeZone": 14,
        "NtpInterval": 1
    }
}

```

3.7 central connection

Gets or sets the central connection parameters.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|---------------|--------------------|------------------------------|---|
| operator | char | GetCenter
or
SetCenter | GetCenter: Get central connection parameters
SetCenter: Central connection parameter setting |
| info | json object | | concrete content |
| ConnectCenter | int
(optional) | 0~1 | Enable central connection
0: Not enabled
1: Enable |
| CenterUrl | char
(optional) | | IP address of central server (maximum 64 bytes) |
| CenterPort | int
(optional) | | Central server port |
| CenterUser | char
(optional) | | User name, the maximum length is 30 characters (including the ending character) |
| CenterPwd | char
(optional) | | Password, up to 30 characters long |

| | | | |
|------------------|-------------------|-----|--|
| | | | (including terminator) |
| SendSnapImage | int
(optional) | 0~1 | Send real time pictures
0: Do not send
1: send out |
| SendVerifyResult | int
(optional) | 0~1 | Whether to send
authentication results
0: Do not send
1: send out |

3.5.1 obtaining central connection parameters

Operator: **GetCenter**

URI: **http://<server ipaddr>/action/GetCenter**

e. g. ,

http://192.168.2.10/action/GetCenter

Reply to body

```
{
  "operator": "GetCenter",
  "info": {
    "ConnectCenter": 0,
    "CenterUrl": "192.168.2.10",
    "CenterPort": 6666,
    "CenterUser": "admin",
    "CenterPwd": "admin",
    "SendSnapImage": 1,
    "SendVerifyResult": 1
  }
}
```

3.5.2 setting central connection parameters

Operator: **SetCenter**

URI:**http://<server ipaddr> /action/SetCenter**

e. g. ,

http://192.168.2.10 /action/SetCenter

Issue body

```
{
  "operator": "SetCenter",
  "info": {
    "ConnectCenter": 0,
    "CenterUrl": "192.168.2.10",
    "CenterPort": 6666,
    "CenterUser": "admin",
    "CenterPwd": "admin",
    "SendSnapImage": 1,
    "SendVerifyResult": 1
  }
}
```

3.8 restoration of factory

The restoration of factory interface mainly involves the setting of factory mode, list and control record, etc. It is irreversible to restore the snapshot record, personnel list database and control record. Please operate with caution. For those parts that do not need to be restored, partial recovery is supported.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|---------------|--------------------------------|-------------------|--|
| operator | char | SetFactoryDefault | Set device to factory |
| info | json object | | concrete content |
| DefaltDoorSet | unsigned
char
(optional) | 0~1 | Whether the door opening conditions are restored to the factory
0: No return to factory
1: Return to factory |
| DefaltSoundSe | unsigned | 0~1 | Is the sound setting |

| | | | |
|------------------------|--------------------------------|-----|---|
| t | char
(optional) | | restored to factory
0: No return to factory
1: Return to factory |
| DefaltNetPar | unsigned
char
(optional) | 0~1 | Are network parameters
restored to factory
0: No return to factory
1: Return to factory |
| DefaltCenterP
ar | unsigned
char
(optional) | 0~1 | Whether the central
connection parameters
are restored to the
factory
0: No return to factory
1: Return to factory |
| DefaltCapture | unsigned
char
(optional) | 0~1 | Is the snapshot record
+ control record
restored to the factory
0: No return to factory
1: Return to factory |
| DefaltLog | unsigned
char
(optional) | 0~1 | Is the log record
restored to the factory
0: No return to factory
1: Return to factory |
| DefaltPerson | unsigned
char
(optional) | 0~1 | Whether the personnel
list database + control
records are restored to
the factory
0: No return to factory
1: Return to factory |
| DefaltRecord | unsigned
char
(optional) | 0~1 | Whether the control
records are restored to
the factory
0: No return to factory
1: Return to factory |
| DefaltMaintai
nTime | unsigned
char | 0~1 | Is the factory
maintenance time of the |

| | | | |
|------------------------|-----------------------------|-----|---|
| | (optional) | | system restored
0: No return to factory
1: Return to factory |
| DefaultSystemSettings | unsigned char
(optional) | 0~1 | System parameters: The type of ID card reader; whether to record snapshot, ID card, authentication record and other parameters are restored to factory
0: No return to factory
1: Return to factory |
| DefaultEnterIPC | unsigned char
(optional) | 0~1 | (used by the face analysis server), whether the parameters of the access camera are restored to the factory
0: No return to factory
1: Return to factory |
| DefaultServerBasicPara | unsigned char
(optional) | 0~1 | Basic parameter configuration: information release; channel selection; clear interface capture and comparison information Whether to restore the factory
0: No return to factory
1: Return to factory |
| DefaultWorktype | unsigned char
(optional) | 0~1 | (used by the face analysis server), whether the personnel type parameters are restored to the factory |

| | | | |
|--|--|--|---|
| | | | 0: No return to factory
1: Return to factory |
|--|--|--|---|

Operator: **SetFactoryDefault**

URI: **http://<server ipaddr>/action/SetFactoryDefault**

e. g. ,

http://192.168.2.10/action/SetFactoryDefault

Issue body

```
{
  "operator": "SetFactoryDefault",
  "info": {
    "DefaultDoorSet": 0,
    "DefaultSoundSet": 0,
    "DefaultNetPar": 0,
    "DefaultCenterPar": 0,
    "DefaultCapture": 0,
    "DefaultLog": 0,
    "DefaultPerson": 0,
    "DefaultRecord": 0,
    "DefaultMaintainTime": 0,
    "DefaultSystemSettings": 0,
    "DefaultEnterIPC": 0,
    "DefaultServerBasicPara": 0,
    "DefaultWorktype": 0
  }
}
```

3.9 equipment information

Gets or sets device information.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-----|------|--------|-------------|
|-----|------|--------|-------------|

| | | | |
|----------|--------------------|----------------------------|---|
| operator | char | GetSysParam or SetSysParam | Gets or sets system device information |
| info | json object | | concrete content |
| Name | char
(optional) | | Device name, up to 64 characters in length (including terminator) |
| DeviceID | int
(optional) | | Device ID (not settable) |
| Version | char
(optional) | | System version (not settable) |

3.9.1 obtaining equipment information

Operator: **GetSysParam**

URI: **http://<server ipaddr>/action/GetSysParam**

e. g. ,

http://192.168.2.10/action/GetSysParam

Reply to body

```
{
  "operator": "GetSysParam",
  "info": {
    "Name": "facegate1",
    "DeviceID": 1300001,
    "Version": "v4.0.5-0.0.6.0"
  }
}
```

3.9.2 setting device information

Allows you to set the name of the device.

Operator: **SetSysParam**

URI: **http://<server ipaddr>/action/SetSysParam**

e. g. ,

http://192.168.2.10/action/SetSysParam

Reply to body

```
{
  "operator": "SetSysParam",
  "info": {
    "Name": "facegate_test"
  }
}
```

3.10 addition, editing and modification of the list

Addition and modification of the list. Corresponding to the distributed personnel list images, the picture data can be filled in Base64 with the key value of picinfo, or the URI address of the picture can be filled in by the key value of picuri, and the corresponding image data can be obtained by the face recognition all-in-one machine. Choose one of these two methods. When picinfo and picuri pass in data at the same time, the data corresponding to picinfo is obtained by default.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|-------------------------------|---|
| operator | char | AddPerson
or
EditPerson | AddPerson: Add list to list Library
EditPerson: Modify the personnel information in the list library |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |

| | | | |
|-------------|----------------------------|--|---|
| IdType | int | 0~2 | The type of ID that needs to be operated on,
0:CustomizeID,
1:Libid, (modified)
2:PersonUUID |
| CustomizeID | unsigned int
(optional) | | User defined ID
Required when idtype = 0 |
| LibID | int
(optional) | | Database ID (for modification)
Required when idtype = 1 |
| PersonUUID | char
(optional) | | User defined UUID
Required when idtype = 2 |
| PersonType | int
(optional) | 0 ~ 1 (all in one machine)
0 ~ 11 (analysis server) | List type
0: White list
1: blacklist
2-11: personnel type (used by analysis server) |
| Name | char
(optional) | | Name, maximum length 32 characters (including ending) |
| Gender | int
(optional) | 0~1 | Gender
0: male
1: female |
| Nation | int
(optional) | 1~57 | nation
1: "Han"
See Appendix D.1 Nationalities |
| CardType | int
(optional) | | Document type
0:ID |
| IdCard | char
(optional) | | ID number, the maximum length is 32 characters (including ending character) |
| Birthday | char | YYYY-MM-DD | Birthday, e. g., January |

| | | | |
|----------------|--------------------|------------|--|
| | (optional) | | 1, 2018 |
| Telnum | char
(optional) | | Phone number, up to 32 characters long (including terminator) |
| Native | char
(optional) | | Native place, the maximum length is 32 characters (including ending character) |
| Address | char
(optional) | | Address, with a maximum length of 72 characters (including terminator) |
| Notes | char
(optional) | | Note, the maximum length is 64 characters (including terminator) |
| MjCardFrom | int
(optional) | 0~3 | The generating mode of wiegenka number
0: Public card number
1: Automatic generation
2: Manual input
3: Do not use access card number |
| WiegandType | int
(optional) | 0~1 or 6~7 | The Wiegand agreement according to which the wagenka number is composed; when mjcardfrom = 2 is required;
0: 26
1: 34
6: 26 digits (8 + 16 facility code + userid (equipment code + card number) should be filled in separately);
7: 34 digits (8 + 24 facility code + userid)
Default: 1 (34 bits) |
| WGFacilityCode | int
(optional) | | Facility code; required when wiegandtype = 6 or 7; used with mjcardno. When |

| | | | |
|------------|----------------------------|-----|---|
| | | | wiegandtype = 0 or 1, it is not necessary to fill in. See 3.10.5 Wigan access card number and built-in swipe ID card number |
| MjCardNo | unsigned int
(optional) | | User ID; required when Wiegand type = 6 or 7, used together with wgfacility code. When Wiegand type = 0 or 1, it forms the wiegenka number alone. See 3.10.5 Wigan access card number and built-in swipe ID card number |
| CardMode | unsigned int
(optional) | 0~1 | The access control card number adopts the mode
0: Decimal card number
1: Hexadecimal composition card number
Default 0: For the card number of decimal system, please refer to 3.10.5 Wigan access card number and built-in swipe ID card number |
| RFCardMode | unsigned int
(optional) | 0~1 | The RF (ID) card number adopts the mode, aiming at the built-in card reader
0: Decimal card number
1: Hexadecimal composition card number
Default 1: Hexadecimal composition card number |

| | | | |
|-------------|----------------------------|--|--|
| RFIDCard | Char
(optional) | If rfcardmode = 0, fill in the decimal string ("1369406761"); if rfcardmode = 1, fill in the hexadecimal string ("519f7d29") | ID card number, the maximum length is 18 characters, for the built-in card reader (including the end character). See 3.10.5 Wigan access card number and built-in swipe ID card number |
| Tempvalid | int
(optional) | 0~3 | Is it a temporary list
0: Permanent effective list
1: Provisional list 1 (start and end period)
2: Temporary list 2 (daily time period, new database version support)
3: Temporary list 3 (valid times, supported by new database version) |
| CustomizeID | unsigned int
(optional) | | The ID number of the user can be modified by the user ID number. Note: you can't use the same ID to add personnel repeatedly, otherwise it will cause errors in modification, deletion and other operations. |
| PersonUUID | char
(optional) | | The user-defined personnel UUID number can be modified or |

| | | | |
|------------|--------------------|---------------------|--|
| | | | deleted to manage the corresponding personnel information. Note: it is not allowed to add personnel with the same ID repeatedly, otherwise it will cause errors in modification, deletion and other operations (no more than 48 bytes) |
| ValidBegin | char
(optional) | YYYY-MM-DDThh:mm:ss | <p>If it is temporary list 1, the start time of the temporary list taking effect, e.g., 2018-03-12t09:09:20</p> <p>If it is a temporary list, 2: e.g., 2018-03-12t09:09:20</p> <p>March 12, 2018 is the starting time for the provisional list to take effect;</p> <p>09:09:20 is the start time of the temporary list taking effect, minutes and seconds;</p> |
| ValidEnd | char
(optional) | YYYY-MM-DDThh:mm:ss | <p>If it is temporary list 1, the end time of temporary list 1 effective, e.g., 2018-03-12t09:10:00</p> <p>If it is a temporary list, 2: e.g.,</p> |

| | | | |
|-----------------------|----------------------------|--------------------------|---|
| | | | 2018-03-12t09:09:20
March 12, 2018 is the end time of the provisional list taking effect;
09:09:20 is the end time when the temporary list takes effect; |
| ChannelAutho
rityX | int
(optional) | 0~1 | Channel x
permission:0:No
channel permission
1:Have channel
permission (for face
multi-channel server) |
| EffectNumber | unsigned int
(optional) | 0 <EffectNumber<
2^32 | Number of valid passes
for provisional list 3,
1 ~ 4294967295 |
| isCheckSimil
arity | int
(optional) | 0~1 | Whether to check the
image (if the
similarity of the added
image is greater than
the threshold value of
the black and white
list, the list already
exists). The default
value is 0: no check, 1:
check |
| IdCardId | char
(optional) | | ID card ID, the maximum
length is 32 characters
(including
terminator). (only for
access control, other
models are invalid) |
| AccessId | char
(optional) | | The maximum length of
the access card number |

| | | | |
|----------|---------------------|--|---|
| | | | is 24 characters (including the ending character). (only for 12 inch access control machine, other models are invalid) |
| WardenId | char
(optional) | | Administrator authorization card, the maximum length is 32 characters (including the ending character). (only for access control, other models are invalid) |
| RoomNum | char
(optional) | | Room number, the maximum length is 24 characters (including the ending character). (only for access control, other models are invalid) |
| picinfo | char
And picuri | | Base64 encoded data of face image (no more than 1m) |
| picURI | char
And picinfo | https://btngps.o
ss-cn-beijing.al
iyuncs.com/image
/xxx.jpg | Cloud URI address of face image data |

3.10.1 single list addition

The error codes added to a single list are returned in the appendix [C. 10.1.1 add error code to single list](#).

Operator: AddPerson

URI: http://<server ipaddr>/action/AddPerson

e. g. ,

http://192.168.2.10/action/AddPerson

```
e. G.1, add permanent list + Wigan access control card number 1046239
(decimal card number, Wigan 34 digits) + picture data is encoded by Base64
{
  "operator": "AddPerson",
  "info": {
    "DeviceID":1300001,
    "PersonType": 0,
    "Name": Zhang San,
    "Gender":0,
    "Nation":1,
    "CardType":0,
    "IdCard":"430923199011044411",
    "Birthday":"1990-11-04",
    "Telnum":"18888888888",
    "Native": Guangdong,
    "Address": Shenzhen Bao' an,
    "Notes":,
    "MjCardFrom": 2,
    "WiegandType":1,
    "CardMode":0,
    "MjCardNo": 1046239,
    "Tempvalid": 0,
    "CustomizeID": 123456,
    "PersonUUID": "4476c20c-23ce-4178-8672-b292d33a3cd8",
    "isCheckSimilarity": 0
  },
  "picinfo":"data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB....."
}
```

Or

e. G.2, add temporary list 1 + Wigan access control card No. 9a018b2d (hexadecimal card number, Wigan 8 + 24) + image data adopts URI

```
{
  "operator": "AddPerson",
  "info": {
    "DeviceID": 1300001,
    "PersonType": 0,
    "Name": "test",
    "Gender": 0,

}

```

3.10.4 getting the old and new database versions

The new database supports temporary list 2 and temporary list 3. The old database is restored to the factory in the latest version, and the device is restarted. After the device is started, it is the latest database.

Parameter information:

| Key | Type | Values | Description |
|-----------------|-------------|----------------|--|
| operator | char | GetDatabaseVer | Gets the database version of the device |
| info | json object | | concrete content |
| DatabaseVersion | int | 0~1 | Database version
0: old database
1: New database |

Operator: GetDatabaseVer

URI: <http://<server ipaddr>/action/GetDatabaseVer>

e. g. ,

<http://192.168.2.10/action/GetDatabaseVer>

Reply to body

```

{
  "operator": "GetDatabaseVer",

```

```
    "info": {  
        " DatabaseVersion ": 1  
    }  
}
```

3.10.5 Wigan access card number and built-in swipe ID card number

The Weigan access control card number is mainly for the type of external card reader, which needs to be filled in for the comparison and passage under the card swiping mode; the Weigan output of the external card reader uses this Weigan access card number. In the mode of 8 + 16 or 8 + 24, wgfacility code and mjcardno field together constitute the Weigan access card number; in the mode of 26 bit or 34 bit Wigan protocol, the mjcardno field alone constitutes the Weigan access card number.

The RFID card (ID card number) field is commonly used in the face recognition all-in-one machine with built-in card reader. If the built-in card reader wants to output the weigencard number, it also needs to follow the [3.10 addition, editing and modification of the list](#) Fill in the corresponding Wigan access control card number according to the rules; that is, the rfidcard field is used for comparison and Wigan output in the card swiping mode, while the built-in swiping card model outputs the Weigan access card number when the face swiping mode is used. For the built-in swiping card model, in order to output the same number in the face brushing and card swiping modes, the same field needs to be filled in according to the corresponding rules.

about [3.12.4 reporting of certification results](#) and [3.19 list search query](#) and [3.22 control record query](#) All the fields of weigen access card number returned in are based on [3.2 setting of door opening conditions](#) The Wiegand and cardmode parameters of the. If the system parameter Wiegand is 4 or 5 or 6 or 7, the returned wgfacility code and mjcardno field together constitute the Weigan access card number; when the Wiegand is 0 or 1, the mjcardno field separately constitutes the Weigan access card number; when the cardmode card number mode is 0 (decimal), the returned

Wigan access card number is decimal, and the cardmode card number mode is 1 (hexadecimal) mode, Return to Wigan. The access card number is hexadecimal. The return of rfidcard field is a string. When adding / modifying the list, the corresponding decimal / hexadecimal value will be saved according to the value of rfcarmode.

3.11 deletion of the list

The delete personnel list interface will delete the control record (authentication record) of the corresponding personnel list at the same time, and cannot be recovered. Therefore, it should be operated with caution; if the deletion of all personnel lists is successful, the face recognition integration opportunity will restart automatically.

3.11.1 deletion of single or multiple lists

The list can be deleted by libid or customid. Libid or customid cannot be 0

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|---------------------------------|---|
| operator | char | DeletePerson or DeleteAllPerson | DeletePerson:Delete the personnel information in the list library
DeleteAllPerson:Delete all personnel list information |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |

| | | | |
|----------------------|-----------------------|-------|---|
| TotalNum | int | 1~256 | How many personnel information need to be deleted in this operation |
| IdType | int | 0~2 | 0:User defined customization ID, 1: device database libid, 2: personuuid |
| LibID | json array (optional) | | A collection of single or multiple libids of type unsigned int in the format of JSON array of libids
Required when idtype = 1 |
| CustomizeID | json array (optional) | | A collection of single or multiple customizeids of type int in the form of a JSON array of customizeids
Required when idtype = 0 |
| PersonUUID | json array (optional) | | A collection of single or multiple UUIDs. UUID is a char type string of no more than 48 bytes in the format of JSON array of UUIDs
Required when idtype = 2 |
| DeleteAllPersonCheck | json array | 1 | Required when operator is deleteallperson |

Operator: **DeletePerson**

URI: **http://<server ipaddr>/action/DeletePerson**

e. g. ,

http://192.168.2.10/action/DeletePerson

Issue body

```
{
  "operator": "DeletePerson",
  "info": {
    "DeviceID": 1300001,
    "TotalNum": N,
    "IdType": 0,
    "CustomizeID": [1, 2, 3, .....]
  }
}
Or
{
  "operator": "DeletePerson",
  "info": {
    "DeviceID": 1300001,
    "TotalNum": N,
    "IdType": 1,
    "LibID": [1, 2, 3, .....]
  }
}
Or
{
  "operator": "DeletePerson",
  "info": {
    "DeviceID": 1300001,
    "TotalNum": N,
    "IdType": 2,
    "PersonUUID": ["4476c20c-23ce-4178-8672-b292d33a3cd8", .....]
  }
}
```

3.11.2 deletion of all personnel list

All personnel list deletion interface will delete the control records (authentication records) of all personnel lists at the same time and cannot be restored. Therefore, it is necessary to operate cautiously. If the deletion of all personnel lists is successful, the face recognition integration opportunity will restart automatically.

Operator: **DeleteAllPerson**

URI: **http://<server ipaddr>/action/DeleteAllPerson**

e. g. ,

http://192.168.2.10/action/DeleteAllPerson

Issue body

```
{
  "operator": "DeleteAllPerson",
  "info":
  {
    "DeleteAllPersonCheck": 1
  }
}
```

3.12 data subscription

The types of data subscription include: authentication result information subscription, stranger snapshot subscription and so on.If the breakpoint continuous transmission function is enabled, the server needs to return the pushed stranger snapshot information and authentication information. See[C. 12.4.1 reply the data packet with the server of network interruption and continuous transmission](#).

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|----------------|-----------|----------------------|
| operator | char | Subscribe | Message subscription |
| info | json
object | | concrete content |

| | | | |
|----------|------------|--|---|
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |
| Num | int | 1~4 | How many types of information to subscribe to |
| Topics | json array | "Snap",
"Verify",
"VerifyWithSnap",
"VerifyWithReg",
"VerifyNoPic",
"QRCode",
"Card",
"PassWord",
"IDCard" | A collection of single or multiple subscription message types (up to 128 bytes), such as:
["snap": subscribe to real-time snapshot reporting
or
["verify": subscribe to the report of authentication results (with snapshot + registration image)
or
["verifywithsnap"]: subscribe to the report of authentication results (only with captured pictures)
or
["verifywithreg"]: subscribe to the report of authentication results (only with registration images)
or
["verifynopic"]: subscribe to the report of authentication results (without pictures)
or
["QRcode": subscribe to QR code report
or
["snap", "verify"] subscription snapshot and authentication result reporting
or
["card"] subscription access control IC card certification results report (12 inch access control model is valid) |

| | | | |
|---------------|---------------|-----------------------------------|--|
| | | | <p>or</p> <p>["password"] subscription access control password authentication results report (12 inch access control model is valid)</p> <p>["IDcard"] subscription ID card information reporting</p> |
| SubscribeAddr | char | http://<Subscribe server ip>:port | Subscription address, including IP and port, e.g., http: / / 192.168.2.11:8080 |
| SubscribeUrl | json object | | <p>A collection of single or multiple reported URLs, including snapshot, authentication result, heartbeat, QR code, IC card number authentication result (access control), password authentication result (access control), and ID card information.</p> <p>e.g.,</p> <pre>{ "Snap": "/Subscribe/Snap", "Verify": "/Subscribe/Verify", "HeartBeat": "/Subscribe/heartbeat", "Card": "/Subscribe/Card", "QRCode": "/Subscribe/QRCode ", "PassWord": "/Subscribe/PassWord ", "IDCard": "/Subscribe/IDCard" }</pre> |
| BeatInterval | int(optional) | | Heartbeat interval, unit second, if not set, the default is 30 seconds |
| bTimedPush | int(optional) | 0~1 | Snapshot, authentication, QR code, etc. are pushed to the |

| | | | |
|-----------------------|----------------|-------------------|--|
| | | | server regularly, and are not opened by default.
0:Do not turn on timed push
1:Turn on timed push |
| PushInterval | int(optional) | | When btimedpush = 1, it is required to set the push interval |
| Auth | char(optional) | “none” or “Basic” | Do post submit the submitted information for authentication
None : No authentication processing is required
Basic : Post basic authentication |
| User | char(optional) | | User name, maximum length 64 characters (including terminator)
Auth = basic is required |
| Pwd | char(optional) | | Password, maximum length 64 characters (including terminator)
Auth = basic is required |
| Resumefrom Breakpoint | int | 0~1 | Whether to enable breakpoint continuation (in the mode of stranger snapshot subscription or authentication subscription), 0: not enabled, 1: enabled.Do not open the breakpoint resume function, only ensure the push data, do not need the server to return.If the function is enabled, the server needs to return the following JSON packets for the pushed stranger snapshot information and authentication information:
{ |

| | | | |
|-----------|------------------------|-------------------------|---|
| | | | <pre>"code": 200, "desc": "OK", }</pre> <p>After 10 seconds, if the all-in-one machine does not receive the correct data packet from the server, it will continue to push this message.</p> |
| BeginTime | char
(optional
) | YYYY-MM-DDTh
h:mm:ss | <p>The default start time of breakpoint continuation can be left blank. The default is to set the time for stranger snapshot subscription, authentication subscription and breakpoint continuation function. When the stranger snapshot and authentication snapshot information push before the breakpoint is completed, this time will become the time to complete the breakpoint continuous transmission and push. e. g., 2018-03-12T09:10:00</p> |

3.12.1 push information does not require authentication

3.12.3 strangers snapshot Report

Parameter information:

| Key | Type | Values | Description |
|----------|------|----------|--------------------------------|
| operator | char | SnapPush | Snapshot and push of strangers |

| | | | |
|-------------------|--------------|----------------------------|---|
| info | json object | | concrete content |
| DeviceID | int | | Device ID number of the device |
| CreateTime | char | YYYY-MM-DD
Thh:mm:ss | Strangers capture the time.e.g.,
2018-03-25T21:50:05 |
| PictureType | unsigned int | 0~4 | Types of captured face pictures
0: Comparison failed
1: Blacklist of successful comparison
2: White list of successful comparison
3: ID card + face comparison failed
4: ID card + face match successful |
| Temperature | double | 37.20 | Real time detection of face temperature. When the door opening mode is equipped with temperature detection mode, the detection temperature is returned (temperature detection machine version support) |
| Temperature Alarm | int | 0~1 | Real time detection of whether the face temperature exceeds the threshold, 0: not exceeded; 1: over (temperature detection machine version support) |
| SnapChannel | int | 0 ~ maximum channel number | Channel number of personnel capture (used by face multi-channel server) |
| Sendintime | int | 0~1 | Whether to push information in time, 0: not in time (push time is 10 seconds longer than capture time) 1: timely push |

| | | | |
|-----------|-------------------|-----|---|
| Direction | int
(optional) | 0~2 | Entrance and exit direction
0: one way
1: Entrance
2: Export |
| SanpPic | char | | Base64 encoded data of face
images captured by strangers |

e. g. , Raw:

```
-- HEADERS  --

    "DeviceID":1300001,
    "CreateTime":"2018-03-12T09:09:20",
    "PictureType":0,
    "Sendintime":1
  },
  "SanpPic": "data:image/jpeg;base64,/9j/4AAQSkZJRgABAQEB....."
}
```

3.12.4 reporting of certification results

Parameter information:

| Key | Type | Values | Description |
|----------|-------------|------------|----------------------------|
| operator | char | VerifyPush | Authentication result push |
| info | json object | | concrete content |

| | | | |
|--------------|-------|---|---|
| DeviceID | int | | Device ID number of the device |
| PersonID | int | | The personnel ID number stored in the device can be modified through this ID when the customeid and personuuid are invalid |
| CreateTime | char | YYYY-MM-DDThh:mm:ss | Control the recording time. e. g. ,
2018-03-25T21:50:05 |
| Similarity 1 | float | 0.0~100.0 | Similarity of black and white list comparison |
| Similarity 2 | float | 0.0~100.0 | Identity card comparison similarity |
| VerifyStatus | int | 0 ~ 3 or 22, 24 | Certification results
0: nothing
1: allow
2: refuse
3: Not yet registered
22:To be verified (control record of door opening mode is 3: face verification + remote door opening mode)
24:No permission (special version of control record of non passage time) |
| VerifyType | int | 1: Or 22 ~ 27 ~ 27 ~ 3 or 22 ~ 3;
2: Special machines:
Support mask detection or (!) operation, and 0x100 indicates passing with mask detection;
It supports | Validation type.
1: Whitelist verification
2: ID card verification
3: White list + ID card verification
21:RF card verification (built-in swipe card model)
22:RF card verification + whitelist verification (built-in swipe card model)
24:Wegenka verification
25:Wegenka + whitelist verification |

| | | | |
|------------|-----|---|---|
| | | <p>temperature detection or () operation, and 0x200 indicates that it has temperature detection;</p> <p>Support mask + body temperature detection or () operation. 0x300 indicates that the mask + body temperature detection is available;</p> <p>For example:</p> <p>Mask access (0x100)</p> <p>Mask + whitelist verification (0x101)</p> <p>Temperature pass (0x200)</p> <p>Body temperature + whitelist verification (0x201)</p> <p>Mask + body temperature (0x300)</p> <p>Mask + body temperature + Wigan swipe card + white list verification (0x319)</p> | 27:HTTP remote door opening |
| PersonType | int | 0~1 | <p>List type</p> <p>0: White list</p> <p>1: blacklist</p> |

| | | | |
|------------|------|------------|--|
| Name | char | | Name (maximum length 32 bytes) |
| Gender | int | 0~2 | Gender
0: male
1: female
2: other |
| Nation | int | 1~57 | nation
1: "Han"
See Appendix D.1 Nationalities |
| CardType | int | | Document type
0: ID |
| IdCard | char | | ID number, the maximum length is 32 characters (including ending character) |
| Birthday | char | YYYY-MM-DD | Birthday, e.g., January 1, 2018 |
| Telnum | char | | Phone number, up to 32 characters long (including terminator) |
| Native | char | | Native place, the maximum length is 32 characters (including ending character) |
| Address | char | | Address, with a maximum length of 72 characters (including terminator) |
| Notes | char | | Note, the maximum length is 64 characters (including terminator) |
| MjCardFrom | int | 0~3 | The generating mode of wiegenka number
0: Public card number
1: Automatic generation |

| | | | |
|-----------------|-----------------|-----|---|
| | | | <p>2: Manual input</p> <p>3: Do not use access card number</p> |
| WGFacility Code | int (optional) | | <p>Facility code; when 3.2 door opening conditions When Wiegand = 4 or 5 or 6 or 7 in, together with the mjcardno field, the Wiegand number is formed; when Wiegand = 0 or 1, this parameter has no practical significance. See 3.10.5 Wigan access card number and built-in swipe ID card number</p> |
| MjCardNo | unsigned int | | <p>Weigan access card number (userid). When 3.2 door opening conditions When Wiegand = 4 or 5 or 6 or 7 in, it is combined with wgfacility code field to form the weigenka number; when Wiegand = 0 or 1, it forms the weigenka number alone. See 3.10.5 Wigan access card number and built-in swipe ID card number</p> |
| RFIDCard | Char (optional) | | <p>ID card number, the maximum length is 18 characters. For the built-in card reader (including the end character), please refer to 3.10.5 Wigan access card number and built-in swipe ID card number</p> |
| Tempvalid | int | 0~1 | <p>Is it a temporary list</p> <p>0: Permanent effective list</p> |

| | | | |
|---------------|--------------|----------------------------|---|
| | | | 1: Provisional list
2: Provisional list 2
3: Provisional list 3 |
| CustomizeID | unsigned int | | The ID number of the user can be modified by the user ID number. Note: you can't use the same ID to add personnel repeatedly, otherwise it will cause errors in modification, deletion and other operations |
| PersonUUID | char | | The user-defined personnel UUID number (no more than 48 bytes) can be modified and deleted through this ID number to manage the corresponding personnel information. Note: you can't use the same UUID repeatedly to add personnel, otherwise it will cause errors in modification, deletion and other operations |
| ValidBegin | char | YYYY-MM-DDThh:mm:ss | If it is a provisional list, the start time of the provisional list's entry into force, e.g., 2018-03-12t09:09:20 |
| ValidEnd | char | YYYY-MM-DDThh:mm:ss | If it is a temporary list, the end time of the temporary list taking effect, e.g., 2018-03-12t09:10:00 |
| AccessChannel | int | 0 ~ maximum channel number | Channel number of personnel access (used by face multi-channel server) |

| | | | |
|------------------|-------------------|-------|---|
| Temperature | double | 37.20 | Real time detection of face temperature, when the door open mode with the temperature detection mode, the detection temperature is returned (temperature detection machine version support) |
| TemperatureAlarm | int | 0~1 | Real time detection of whether the face temperature exceeds the threshold, 0: not exceeded; 1: over (temperature detection machine version support) |
| Sendintime | int | 0~1 | Whether to push information in time, 0: not in time (push time is 10 seconds longer than authentication time) 1: timely push |
| Direction | int
(optional) | 0~2 | Entrance and exit direction
0: one way
1: Entrance
2: Export |
| SanpPic | char | | Base64 encoding data of real-time captured face images |
| Registered Pic | char | | Match the base64 encoded data of face images registered in the list database |
| PushType | int | 0~2 | Push type
0:reserve
1:reserve
2:call 3.32 manual push control record Data return for |

3.12.6 reporting of ID card information

Parameter information:

| Key | Type | Values | Description |
|-----------------|-------------|----------------|---|
| operator | char | IDCardInfoPush | ID card information push |
| info | json object | | concrete content |
| DeviceID | int | | Device ID number of the device |
| IDCard_Idno | char | | ID card No. |
| IDCard_Name | | | full name |
| IDCard_Gender | int | | Gender |
| IDCard_Nation | int | | nation:Same as in personnel information |
| IDCard_Birthday | char | | birthday:Year month day |
| IDCard_Address | char | | address |
| IDCard_Issue | | | Issuing authority |
| IDCard_Idperiod | | | term of validity:Mm / DD / yyyy
- mm / DD / yyyy |
| IDCard_photo | | | Photo of ID card |

e. g. , Raw:

```
{
  "operator": "IDCardInfoPush",
  "info": {
    "DeviceID": 1300001,
    "IDCard_Idno": "1234567890",
    "IDCard_Name ": " Zhang San ",
    "IDCard_Gender": 1,
    "IDCard_Nation": 1,
    "IDCard_Birthday": "2016-05-06",
```

```

        "IDCard_Address": "xxxxx",
        "IDCard_Idissue": "xxxxxxx",

    },
    "IDCard_photo": "data:image/jpeg;base64,....."
}

```

3.12.7 report of IC card number certification results (access control)

Parameter information:

| Key | Type | Values | Description |
|------------|-------------|------------|--|
| operator | char | CardVerify | IC card number authentication result push |
| info | json object | | concrete content |
| DeviceID | int | | Device ID number of the device |
| CreateTime | char | | Certification passing time |
| CardNo | char | | IC card number (no more than 24 bytes) |
| HasPic | int | 0~1 | Whether there is a face picture, 0: no face picture, 1: face picture |
| SanpPic | char | | Base64 encoding of captured images |

e. g. , Raw:

```

{
  "operator": " CardVerify",
  "info": {
    "DeviceID":1300001,
    "CreateTime ":"2018-01-01T00:00:00",

    "HasPic ":"1,
    "SanpPic": "data:image/jpeg;base64, ....."
  }
}

```

```
}
```

3.12.8 report of password authentication results (access control machine)

Parameter information:

| Key | Type | Values | Description |
|------------|-------------|-----------|--|
| operator | char | PwdVerify | Push password authentication results |
| info | json object | | concrete content |
| DeviceID | int | | Device ID number of the device |
| CreateTime | char | | Certification passing time |
| HasPic | int | 0~1 | Whether there is a face picture, 0: no face picture, 1: face picture |
| SanpPic | char | | Base64 encoding of captured images |

e. g. , Raw:

```
{
"operator": " PwdVerify ",
"info": {
  "DeviceID":1300001,
  "CreateTime ":"2018-01-01T00:00:00",
  "HasPic ":1,
  "SanpPic": "data:image/jpeg;base64, ....."
}
}
```

3.13 unsubscribe

Subscription and unsubscribed information, including results of authentication

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|---|---|
| operator | char | Unsubscribe | Unsubscribe |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |
| Num | int | 1~2 | How many types of information are unsubscribed |
| Topics | json array | "Snap",
"Verify",
"VerifyWithSnap",
"VerifyWithReg",
"VerifyNoPic",
"QRCode",
"PassWord",
"Card" | A collection of single or multiple subscription message types, such as:
["snap"]: unsubscribe real-time snapshot reporting
or
["verify"]: unsubscribe to submit the authentication result
or
["verifywithsnap"]: unsubscribe to submit authentication results
or
["verifywithreg"]: unsubscribe to submit authentication results |

| | | | |
|--|--|--|---|
| | | | <p>or</p> <p>["verifynopic"): unsubscribe from the report of authentication results</p> <p>or</p> <p>["QRcode": cancel the report of QR code results</p> <p>or</p> <p>["snap", "verify"] unsubscribe capture and authentication result reporting</p> <p>or</p> <p>"Snap" and ["snap with"]</p> <p>or</p> <p>["snap", "verifywithreg"] unsubscribe capture and authentication result reporting</p> <p>or</p> <p>["snap", "verifynopic"] unsubscribe capture and authentication result reporting</p> <p>or</p> <p>["password", "card"] unsubscribe the report of IC card number authentication result and password authentication result (access control machine)</p> |
|--|--|--|---|

Operator: **Unsubscribe**

URI: **http://<server ipaddr>/action/Unsubscribe**

e. g. ,

http://192.168.2.10/action/Unsubscribe

Issue body

```
{
  "operator": "Unsubscribe",
  "info": {
    "DeviceID": 1300001,
    "Num": 2,
    "Topics":["Snap", "Verify"]
  }
}
Or
{
  "operator": "Unsubscribe",
  "info": {
    "DeviceID": 1300001,
    "Num": 2,
    "Topics":["Snap", "VerifyWithReg"]
  }
}
Or
{
  "operator": "Unsubscribe",
  "info": {
    "DeviceID": 1300001,
    "Num": 1,
    "Topics":["QRCode"]
  }
}
Or
{
  "operator": "Unsubscribe",
  "info": {
    "DeviceID": 1300001,
    "Num": 1,
    "Topics":["PassWord"]
  }
}
```

```

}
Or
{
  "operator": "Unsubscribe",
  "info": {
    "DeviceID": 1300001,
    "Num": 1,
    "Topics":["Card"]
  }
}
Or
...

```

3.14 subscription heartbeat

The device obtains the address, port and URL of the heartbeat of the subscription from the data subscription information. The device sends the heartbeat information to the subscription address during the whole subscription validity period. The subscriber needs to reply the heartbeat after receiving the heartbeat of the device to maintain the effective connection between the two parties. Once the heartbeat handshake fails, the device will close the connection and try to connect to the subscription address again, The heartbeat interval is set at 30 seconds. The report of heartbeat needs to subscribe to any HTTP subscription (authentication subscription or stranger snapshot subscription, etc.), and cannot subscribe to heartbeat separately.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|-----------------|--|
| operator | char | HeartBeat | Unsubscribe |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the device to be operated on |
| Time | char | YYYY-MM-DDThh:m | Device current |

| | | | |
|--|--|------|-----------------------------------|
| | | m:ss | time. e. g. , 2018-03-25T21:50:05 |
|--|--|------|-----------------------------------|

e. g. , Raw

```
-- HEADERS  --
POST /Subscribe/heartbeat HTTP/1.1
Accept: application/json
Content-Type: application/json; charset=UTF-8
Content-Length: 128
Accept-Encoding: gzip, deflate
User-Agent: FaceGate-HttpClient/0.0.1
Host:192.168.2.10
Connection: Keep-Alive

-- BODY  --
{
  "operator": "HeartBeat",
  "info":{
    "DeviceID": 1300001,
    "Time": "2018-03-12T09:09:20"
  }
}
```

3.15 access camera parameters

This function is aimed at the server device of face capture comparison, which is not supported by the face recognition all-in-one machine.

Get or set the camera parameters, and check the maximum number of cameras that can be connected according to different device models.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------|----------------------------------|---|
| operator | char | GetEnterIPC
or
SetEnterIPC | GetEnterIPC: Get access camera setting parameters
SetEnterIPC: Setting access camera |

| | | | |
|--------------|--------------------------|--|--|
| | | | parameters |
| info | json object | | concrete content |
| TotalNum | int
(optional) | | Total number of cameras to be set or returned |
| IPC_Info | json array
(optional) | | Set the camera parameter list, and the array member is JSON object |
| IPC_Channel | int | | Camera channel, required when setting camera parameters |
| IPC_Enable | int
(optional) | | Camera enable |
| IPC_URL | char
(optional) | | IP access to camera (no more than 64 bytes) |
| IPC_Port | int
(optional) | | Port to access camera |
| IPC_Username | char
(optional) | | User name to access the camera (no more than 32 bytes) |
| IPC_Password | char
(optional) | | Password to access camera (no more than 32 bytes) |
| IPC_Name | char
(optional) | | Name of access camera (no more than 32 bytes) |

3.15.1 access camera parameters

Operator: **GetEnterIPC**

URI:**http://<server ipaddr>/action/GetEnterIPC**

e. g. ,

http://192.168.2.10/action/GetEnterIPC

Reply body

```

{
  "operator": "GetEnterIPC",
  "info": {
    "TotalNum": 1,
    "IPC_Info": [
      {
        "IPC_Channel": 0,
        "IPC_Enable": 1,
        "IPC_URL": "192.168.1.1",
        "IPC_Port": 5000,
        "IPC_Username": "admin",
        "IPC_Password": "admin",
        "IPC_Name": "ipc1"
      },
      {
        "IPC_Channel": 1,
        "IPC_Enable1": 1,
        "IPC_URL1": "192.168.1.2",
        "IPC_Port1": 5000,
        "IPC_Username1": "admin",
        "IPC_Password1": "admin",
        "IPC_Name1": "ipc2"
      },
      .....
    ]
  }
}

```

3.15.2 setting access camera parameters

Operator: **SetEnterIPC**

URI: **http://<server ipaddr>/action/SetEnterIPC**

e. g. ,

http://192.168.2.10/action/SetEnterIPC

Issued body

```
{
  "operator": "SetEnterIPC",
  "info": {
    "TotalNum": 4,
    "IPC_Info": [
      {
        "IPC_Channel": 0,
        "IPC_Enable": 1,
        "IPC_URL": "192.168.1.1",
        "IPC_Port": 5000,
        "IPC_Username": "admin",
        "IPC_Password": "admin",
        "IPC_Name": "ipc1"
      },
      {
        "IPC_Channel": 1,
        "IPC_Enable": 1,
        "IPC_URL": "192.168.1.1",
        "IPC_Port": 5000,
        "IPC_Username": "admin",
        "IPC_Password": "admin",
        "IPC_Name": "ipc2"
      },
      .....
    ]
  }
}
```

3.16 server parameters of face capture comparison

This function is aimed at the server device of face capture comparison, which is not supported by the face recognition all-in-one machine.

Get or set the parameters of the face capture comparison server.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-----------------------|--------------------|--|---|
| operator | char | GetServerBasicPara
or
SetServerBasicPara | GetServerBasicPara:
Get server parameters
SetServerBasicPara:
Set server parameters |
| info | json object | | concrete content |
| InformationRelease | char
(optional) | | Information release,
up to 128 Chinese
characters |
| Channelselection | int
(optional) | 0, 1, 2, 4, 9 | The maximum number of
paths and adaptive
selection, 0:
adaptive; 1, 2, 4, 9
correspond to the
maximum 1, 2, 4, 9 paths
respectively |
| DisplaySnapshotVerify | int
(optional) | 0~1 | Time clear snapshot
and comparison, 0: not
empty, 1: clear. |

3.16.1 get server parameters

Operator: **GetServerBasicPara**

URI: **http://<server ipaddr>/action/GetServerBasicPara**

e. g. ,

http://192.168.2.10/action/GetServerBasicPara

Reply body

```
{
  "operator": "GetServerBasicPara",
  "info": {
    "Information release": "information release",
    "Channelselection": 0,
    "DisplaySnapshotVerify": 0
  }
}
```

```
}  
}
```

3.16.2 setting server parameters

Operator: SetServerBasicPara

URI: <http://<server ipaddr>/action/SetServerBasicPara>

e. g. ,

<http://192.168.2.10/action/SetServerBasicPara>

Issued body

```
{  
  "operator": "SetServerBasicPara",  
  "info": {  
    "Information release": "information release",  
    "Channelselection": 0,  
    "DisplaySnapVerify": 0  
  }  
}
```

3.17 personnel type parameters

This function is aimed at the server device of face capture comparison, which is not supported by the face recognition all-in-one machine.

Gets or sets the personnel type parameter, which supports up to 10 personnel types.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------|------------------------------|--|
| operator | char | GetWorktype
orSetWorktype | GetWorktype: Get
personnel type
SetWorktype: Set
personnel type
parameters |

| | | | |
|----------------|--------------------|--|--|
| info | json object | | concrete content |
| TotalNum | int
(optional) | | Total number of personnel types to be set or returned |
| WorkTypeInfo | json array | | Set the personnel type list, and the array member is JSON object |
| WorkTypeIndex | int
(optional) | | How many types of personnel are represented |
| WorktypeEnable | int
(optional) | | Worktypeenable indicates that the personnel type is enabled |
| Worktype | char
(optional) | | No more than 32 byte personnel type |
| Num | int
(optional) | | Personnel type No |

3.17.1 get personnel type parameter

Operator: **GetWorktype**

URI: **http://<server ipaddr>/action/GetWorktype**

e. g. ,

http://192.168.2.10/action/GetWorktype

Reply body

```
{
  "operator": "GetWorktype",
  "info": {
    "TotalNum":10,
    "WorkTypeInfo":[
      {
        "WorkTypeIndex":0,
```

```

        "WorktypeEnable":1,
        "Worktype": manager,
        "Num": 0
    },
    {
        "WorkTypeInfo":1,
        "WorktypeEnable":1,
        "Worktype": employee,
        "Num": 1
    },
    .....
]
}
}

```

3.17.2 setting personnel type parameters

Operator: **SetWorktype**

URI:**http://<server ipaddr>/action/SetWorktype**

e. g. ,

http://192.168.2.10/action/SetWorktype

Issued body

```

{
    "operator": "SetWorktype",
    "info": {
        "TotalNum":10,
        "WorkTypeInfo":[
            {
                "WorkTypeInfo":0,
                "WorktypeEnable":1,
                "Worktype": manager,
                "Num": 0
            },
            {

```

```

        "WorkTypeIndex":1,
        "WorktypeEnable1":1,
        "Worktype1": employees,
        "Num1": 0
    },
    .....
]
}
}

```

3.18 face service function

This function is aimed at the server device of face capture comparison, which is not supported by the face recognition all-in-one machine.

The function of face service includes: extracting feature code from image, comparing similarity of feature code, obtaining face image.

3.18.1 image extraction feature code

Operator: **HttpGetFaceSignature**

URI: **http://<server ipaddr>/action/GetFaceSignature**

e. g. ,

http://192.168.2.10/action/GetFaceSignature

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------|------------------|---|
| operator | char | GetFaceSignature | Get face image feature code |
| picinfo | char | | Base64 encoded data of face image (no more than 1m) |

```

{

```

```

    "operator": "GetFaceSignature",
    "picinfo": "data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB....."
}

```

Reply to the correct body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-------------|-------------|------------------|--|
| operator | char | GetFaceSignature | Get face image feature code |
| info | json object | | concrete content |
| FeatureData | char | | Face feature Base64 encoded data |
| FeatureLen | int | | Face feature Base64 encoding data length |
| Gender | int | | Gender: 0: male; 1: uncertain; 2: female |
| Age | int | | Age |

```

{
    "operator": "GetFaceSignature",
    "info": {
        "FeatureData": "4AAQSkZJRgABAQAAQAB.....",
        "FeatureLen": "6144",
        "Gender": 0,
        "Age": 21
    }
}

```

3.18.2 feature code comparison similarity

Operator: GetSignatureSimilarity

URI: http://<server ipaddr>/action/GetSignatureSimilarity

e. g. ,

http://192.168.2.10/action/GetSignatureSimilarity

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|------|------------------------|---|
| operator | char | GetSignatureSimilarity | Comparison of similarity between feature codes |
| Signature1 | char | | Signature code Base64 encoding data (no more than 1m) |
| Signature2 | char | | Signature code Base64 encoding data (no more than 1m) |

```
{
  "operator": "GetSignatureSimilarity",
  "Signature1": "d4AAQSkZJRgABAQAAAQAB.....",
  "Signature2": "4AAQSkZJRgABAQAAAQAB....."
}
```

Reply to the correct body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|-------------|------------------------|--|
| operator | char | GetSignatureSimilarity | Get the feature code comparison similarity |
| info | json object | | concrete content |
| Similarity | float | | Feature code similarity |

```
{
  "operator": "GetSignatureSimilarity",
  "info": {
    "Similarity": 80
  }
}
```

3.18.3 obtaining face images

Operator: **GetImage**

URI: **http://<server ipaddr>/action/GetImage**

e. G., according to the returned file type, file index, file location, get the face image

http://192.168.2.10/action/GetImage

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-----------|--------------|----------|---|
| operator | char | GetImage | Search local face database by graph |
| info | json object | | concrete content |
| Filetype | unsigned int | 0~2 | 0: real time photo file type of ID card |
| Fileindex | unsigned int | | File index reference 3.25.2 to search local face database |
| Filepos | unsigned int | | Refer to 3.25.2 for file location to search local face database |

```
{
  "operator": "GetImage",
  "info": {
    "Filetype":1,
    "Fileindex":0,
    "Filepos":0
  },
  "picinfo":"data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB....."
}
```

Reply to the correct body

Face feature length + face feature length

| Key | Type | Values | Description |
|--------------|-------------|--------------|------------------------------|
| operator | char | HttpGetImage | HttpGetImage: Get face image |
| info | json object | | concrete content |
| FeatureData1 | char | | Face image data |

```
{
  "4AAQSkZJRgABAQAAQAB. ...."
}
```

3.19 list search query

According to the corresponding search criteria to query the list of search criteria.

Return the body parameter information of the list:

| Key | Type | Values | Description |
|------------|-------------|--|---|
| operator | char | SearchPerson
or
SearchPersonList | SearchPerson: Single list query
SearchPersonList: Multiple list queries |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |
| LibID | int | | List database ID |
| PersonType | int | 0~1 | List type
0: White list
1: blacklist |
| Name | char | | Name, maximum length 32 characters (including |

| | | | |
|------------|------|------------|---|
| | | | ending) |
| Gender | int | 0~1 | Gender
0: male
1: female |
| Nation | int | 1~57 | nation
1: "Han"
See Appendix D.1 Nationalities |
| CardType | int | | Document type
0: ID |
| IdCard | char | | ID number, the maximum length is 32 characters (including ending character) |
| Birthday | char | YYYY-MM-DD | Birthday, e.g., January 1, 2018 |
| Telnum | char | | Phone number, up to 32 characters long (including terminator) |
| Native | char | | Native place, the maximum length is 32 characters (including ending character) |
| Address | char | | Address, with a maximum length of 72 characters (including terminator) |
| Notes | char | | Note, the maximum length is 64 characters (including terminator) |
| MjCardFrom | int | 0~3 | The generating mode of wiegenka number
0: Public card number
1: Automatic generation
2: Manual input
3: Do not use access |

| | | | |
|--------------------|--------------------|--|--|
| | | | card number |
| WGFacility
Code | int
(optional) | | Facility code; when 3.2 door opening conditions When Wiegand = 4 or 5 or 6 or 7 in, together with the mjcardno field, the Wiegand number is formed; when Wiegand = 0 or 1, this parameter has no practical significance. See 3.10.5 Wigan access card number and built-in swipe ID card number |
| MjCardNo | unsigned int | | Weigan access card number (userid). When 3.2 door opening conditions When Wiegand = 4 or 5 or 6 or 7 in, it is combined with wgfacility code field to form the weigenka number; when Wiegand = 0 or 1, it forms the weigenka number alone. See 3.10.5 Wigan access card number and built-in swipe ID card number |
| RFIDCard | Char
(optional) | | ID card number, the maximum length is 18 characters. For the built-in card reader (including the end character), please refer to 3.10.5 Wigan access card number and built-in swipe ID card |

| | | | |
|--------------|--------------|-----|---|
| | | | number |
| Tempvalid | int | 0~3 | Is it a temporary list
0: Permanent effective list
1: Provisional list
2: Provisional list 2
3: Provisional list 3 |
| CustomizeID | unsigned int | | The ID number of the user can be modified by the user ID number. Note: you can't use the same ID to add personnel repeatedly, otherwise it will cause errors in modification, deletion and other operations. |
| PersonUUID | char | | The user-defined personnel UUID number (no more than 48 bytes) can be modified and deleted through this ID number to manage the corresponding personnel information. Note: the same UUID cannot be used repeatedly to add personnel, otherwise it will cause errors in modification, deletion and other operations. |
| EffectNumber | int | | The effective times of personnel in temporary list 3. When the list |

| | | | |
|------------|------|---------------------|---|
| | | | type is temporary list 3, the valid times are returned |
| ValidBegin | char | YYYY-MM-DDThh:mm:ss | If it is a provisional list, the start time of the provisional list's entry into force, e.g., 2018-03-12t09:09:20 |
| ValidEnd | char | YYYY-MM-DDThh:mm:ss | If it is a temporary list, the end time of the temporary list taking effect, e.g., 2018-03-12t09:10:00 |
| picinfo | char | | Base64 encoding data of face image |

3.19.1 single list query

Operator: SearchPerson

URI: http://<server ipaddr>/action/SearchPerson

e. G., query the list based on the customized ID, UUID, or database ID you are looking for

http://192.168.2.10/action/SearchPerson

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|-------------|--------------|--|
| operator | char | SearchPerson | SearchPerson: List search based on customeid, UUID, or database ID |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| SearchType | int | 0~2 | 0:CustomizeID 1:UUID |

| | | | |
|----------|------------|-----|--|
| | (optional) | | 2:ID database |
| SearchID | char | | Searchid, UUID
content, or database
ID |
| Picture | int | 0~1 | Include picture information
0:List without
picture information
1:List with picture
information |

```
{
  "operator": "SearchPerson",
  "info": {
    "DeviceID":1300001,

}  
Or  
....
```

3.19.2 total number of query lists

Operator: SearchPersonNum

URI: http://<server ipaddr>/action/SearchPersonNum

e. G. returns the total number of qualified lists according to the query criteria

Search Description:

- 1、 Search by time:Set the start time and end time of search. The name is empty
- 2、 Search by name or fuzzy Name: Set the start time and end time of search to be empty, and the name should not be empty

http://192.168.2.10/action/SearchPersonNum

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|--------------------|-----------------|---|
| operator | char | SearchPersonNum | SearchPersonNum:
Returns the total number of qualified lists according to the query criteria |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| PersonType | int
(optional) | 0~2 | List type 0:Whitelist
1:Blacklist 2:All |
| BeginTime | char
(optional) | | Starting time of search |
| EndTime | char | | The end time of the |

| | | | |
|----------|----------------------------|--|---|
| | (optional) | | search |
| Gender | int
(optional) | | Gender 0:Male 1:female |
| Age | char
(optional) | | Age range:For example,
1-100 |
| MjCardNo | unsigned int
(optional) | | Access control card
number 0:The condition
is invalid |
| Name | char
(optional) | | Name (no more than 32
bytes) |

```

{
  "operator": "SearchPersonNum",
  "info": {
    "DeviceID":1300196,
    "PersonType":0,

        "PersonNum": 8
    }
}

```

3.19.3 multiple list queries

Operator: SearchPersonList

URI: <http://<server ipaddr>/action/SearchPersonList>

e. G. query the list according to the query conditions, the starting position to be searched and the number of lists to be queried

Search Description:

1、 Search by time:Set the start time and end time of search. The name is empty

2、 Search by name or fuzzy Name: Set the start time and end time of search to be empty, and the name should not be empty

<http://192.168.2.10/action/SearchPersonList>

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|----------------------------|------------------|--|
| operator | char | SearchPersonList | SearchPersonList:
Returns the list based on the starting position and the number of queries |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| PersonType | int
(optional) | 0~2 | List type 0:Whitelist
1:黑名单 2:All |
| BeginTime | char
(optional) | | Starting time of search |
| EndTime | char
(optional) | | The end time of the search |
| Gender | int
(optional) | 0~2 | Gender 0:Male
1:Female 2:All |
| Age | char
(optional) | | Age range:For example, 1-100 |
| MjCardNo | unsigned int
(optional) | | Access control card number 0:The condition is invalid |
| Name | char
(optional) | | full name |
| BeginNO | int
(optional) | | Query the starting position of the list, that is, from whom to start |

| | | | |
|--------------|-------------------|-----|--|
| RequestCount | int
(optional) | | The total number of messages returned from the query list can be up to 100, and only 100 messages can be returned if the setting is more than 100. |
| Picture | int | 0~1 | Include picture information
0:List without picture information
1:List with picture information |

```

{
  "operator": "SearchPersonList",
  "info": {
    "DeviceID":1300001,
    "PersonType":0,
    "BeginTime":"2018-06-01T00:00:00",

}
```

3.20 door opening control

Control the door opening.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|----------|--|
| operator | char | OpenDoor | Open the door directly.
Is the specific control switch value or can be checked by weigen 3.2 door opening conditions Weigan uses a public card number |
| info | json object | | concrete content |
| DeviceID | int | | The device ID number of the equipment to be operated can be accessed through 3.9 equipment information acquisition Get. |
| Chn | int | 0~9 | This parameter is invalid for face capture comparison server and face recognition all-in-one machine |
| status | int | | If the value is greater than 0, the door can be opened only when the value is greater than 0. It does not need to |

| | | | |
|-----|------|--|--|
| | | | display the content. This parameter can be used with MSG. |
| msg | char | | Set the current display content of the device, such as: please pass, no access, etc., and the content is in UTF-8 format. This parameter is not required to display the content. It is used with status. |

Operator: **OpenDoor**

URI: **http://<server ipaddr>/action/OpenDoor**

e. g. ,

http://<server ipaddr>/action/OpenDoor

Issue body

```
{
  "operator": "OpenDoor",
  "info": {
    "DeviceID": "1300001",
    "Chn": 0,
    "status": 0,
    "MSG": "please pass"
  }
}
```

Or:

```
{
  "operator": "OpenDoor",
  "info": {
    "DeviceID": "1300001",
```

```

        "Chn": 0,
    }
}

```

3.21 password operation

This function is for access control equipment.

3.21.1 temporary password acquisition

Parameter information:

| Key | Type | Values | Description |
|-------------|-------------|------------------|--|
| operator | char | GetAccessTempPwd | GetAccessTempPwd:
Obtain temporary door
opening password |
| info | json object | | concrete content |
| TempPwd | char | | Temporary password (8
bytes) |
| ValidPeriod | char | | The period of
validity of the
temporary password |

Operator: **SearchPerson**

URI: **http://<server ipaddr>/action/GetAccessTempPwd**

e.g.,

http://192.168.2.10/action/GetAccessTempPwd

Reply to body

```

{
    "operator": "GetTempPwd",
    "info": {
        "TempPwd": "195723",
        "ValidPeriod": "2018-11-16 17:00:00 ~ 2018-11-16 17:59:59"
    }
}

```

```
}
}
```

3.21.2 password addition

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-----------|-------------|--------------|----------------------------------|
| operator | char | AddAccessPwd | AddAccessPwd: Add a new password |
| info | json object | | concrete content |
| AccessPwd | json array | | Cryptoset |

Operator: **SearchPerson**

URI: **http://<server ipaddr>/action/AddAccessPwd**

e. g. ,

http://192.168.2.10/action/AddAccessPwd

Issue body

```
{
  "operator": "AddAccessPwd",
  "info": {
    "AccessPwd": ["123465", "521423", "565424", "456826", "95468"]
  }
}
```

3.21.3 password deletion

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-----------|-------------|--------------|-------------------------------------|
| operator | char | DelAccessPwd | DelAccessPwd: Delete added password |
| info | json object | | concrete content |
| AccessPwd | json array | | One or more sets of passwords |

Operator: **SearchPerson**

URI: **http://<server ipaddr>/action/DelAccessPwd**

e. g. ,

http://192.168.2.10/action/DelAccessPwd

Issue body

```
{
  "operator": "DelAccessPwd",
  "info": {
    "AccessPwd": ["123465", "521423"]
  }
}
```

3.21.4 all passwords are cleared

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|----------------|--|
| operator | char | ClearAccessPwd | ClearAccessPwd:
Delete added password |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |

Operator: **SearchPerson**

URI: **http://<server ipaddr>/action/ClearAccessPwd**

e. g. ,

http://192.168.2.10/action/ClearAccessPwd

Issue body

```
{
  "operator": "ClearAccessPwd",
  "info": {
    "DeviceID": 1300000
  }
}
```

```
}
```

3.22 control record query

The control record query mainly includes the total number of control records and the information query of control record personnel.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|-------------|-------------------|---|--|
| operator | char | SearchControlNum
or
SearchControl | SearchControlNum:Control the total number of records by condition query
SearchControl: Query control records according to conditions |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| SearchType | int
(optional) | 0~1 | Search type: 0: search by criteria (name, time, etc.) 1: search by database ID + time. If this field is not set, the default is search by criteria |
| IdType | int | 0~2 | If the SearchType is 1, i.e. ID + time, this item is required.
0:CustomizeID
1:LibID
2:PersonUUID |
| CustomizeID | unsigned int | | User defined ID |

| | | | |
|------------|----------------------------|-----|---|
| | (optional) | | |
| LibID | unsigned int
(optional) | | List database ID (not control record database ID, if it is equal to 0, this data is the control record generated before the list is deleted) |
| PersonUUID | char
(optional) | | UUID of list database (no more than 48 bytes) |
| Name | char
(optional) | | Name (search according to the name, default does not judge the conditions of condition search); if you are looking for remote door opening control record, please enter "remote door opening" |
| MjCardNo | unsigned int
(optional) | | The access card number is 0 by default |
| Gender | int
(optional) | 0~2 | Gender 0:Male 1:Female 2:All, If this field is not set, the default is all |
| OpenDoor | int
(optional) | 0~2 | 0: All 1: Open the door 2: Reject, do not set this field to all by default |
| Channel | int
(optional) | 0~8 | Analyze the channel number of the server. |

| | | | |
|--------------|--------------------|-------------------|---|
| | | | If the field is not set, the default is all-in-one machine |
| BeginTime | char | | Search start time, required |
| EndTime | char | | Search end time, required |
| Ascending | int
(optional) | 0 ~ 1 (default 0) | Search results in ascending or descending order
0: ascending (results move backward from search start time)
1: Descending (results move forward from search end time) |
| Age | char
(optional) | | Age range, such as 1-100. If this field is not set, the default value is 0-200 |
| BeginNO | int
(optional) | | Return the starting sequence number. If it is not set, it will start from 0 by default |
| RequestCount | int
(optional) | 0~100 | The maximum number of returned records is 100. If it is not set, the maximum number of returned records is 20 |
| Picture | int
(optional) | 0~3 | Include pictures
0:No pictures
1:Include |

| | | | |
|-----------------|----------------|---|--|
| | | | registration image
2:Include captured pictures
3:Include registration + capture pictures |
| RemoteOpenDo or | int (optional) | 1 | If it is a call 3.20 door opening control Open door control record of, return this identification. |

3.22.1 total number of control records query

Query the total number of control records according to the time condition.

Operator: SearchControlNum

URI: <http://<server ipaddr>/action/SearchControlNum>

<http://192.168.2.10/action/SearchControlNum>

Issued body

```
{
  "operator": "SearchControlNum",
  "info": {
    "DeviceID": 1305433,
    "BeginTime": "2020-01-01T00:00:00",
    "EndTime": "2020-12-13T23:09:00"
  }
}
```

Parameter information returned:

| Key | Type | Values | Description |
|------------|-------------|------------------|---|
| operator | char | SearchControlNum | SearchControlNum:Control the total number of records by condition query |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| ControlNum | int | | Returns the total number of control records by time condition |

Returned body:

```
The total number of control records returned by condition

{
    "operator": "SearchControlNum",
    "info": {
        "DeviceID": 1305433,
        "ControlNum": 23
    }
}
```

3.22.2 control record personnel information query

Query and control the personnel information according to the conditions.

Operator: SearchControl

URI: <http://<server ipaddr>/action/SearchControl>

<http://192.168.2.10/action/SearchControl>

Issued body

e. g. ,

http://<server ipaddr>/action/SearchControl

Body:

Search by time:

```
{
  "operator": "SearchControl",
  "info": {
    "DeviceID": 1300001,
    "BeginTime": "2018-11-13T00:00:00",
    "EndTime": "2018-11-13T23:59:59",
    "Picture": 2
  }
}
```

Or

Limit the number of returned lists:

```
{
  "operator": "SearchControl",
  "info": {
    "DeviceID": 1300001,
    "BeginTime": "2018-11-13T00:00:00",
    "EndTime": "2018-11-13T23:59:59",
    "RequestCount": 10,
    "Picture": 2
  }
}
```

Or

Limit the number of returned lists and where to start:

```
{
  "operator": "SearchControl",
  "info": {
    "DeviceID": 1300001,
    "BeginTime": "2018-11-13T00:00:00",
    "EndTime": "2018-11-13T23:59:59",
    "BeginNO": 5,
    "RequestCount": 10,
  }
}
```

```

        "Picture": 2
    }
}
Or
According to the name search, you can fuzzy search:
{
    "operator": "SearchControl",
    "info": {
        "DeviceID": 1300122,
        "Name": Zhang San,
        "BeginTime": "2018-11-13T00:00:00",
        "EndTime": "2018-11-13T23:59:59",
        "Picture": 3
    }
}
Or
Search based on the list of userid: 1, customiid: 0:
{
    "operator": "SearchControl",
    "info": {
        "DeviceID": 1300122,
        "SearchType": 1,
        "IdType": 1,
        "LibID": 1,
        "BeginTime": "2018-11-13T00:00:00",
        "EndTime": "2018-11-13T23:59:59",
        "Picture": 0
    }
}
Or
{
    "operator": "SearchControl",
    "info": {
        "DeviceID": 1300122,
        "SearchType": 1,

```

```

        "IdType": 0,
        "CustomizeID":1234,
        "BeginTime": "2018-11-13T00:00:00",
        "EndTime": "2018-11-13T23:59:59",
        "Picture": 0
    }
}

```

or

```

{
    "operator": "SearchControl",
    "info": {
        "DeviceID": 1300122,
        "SearchType": 1,
        "IdType": 2,
        "PersonUUID": ".....",
        "BeginTime": "2018-11-13T00:00:00",
        "EndTime": "2018-11-13T23:59:59",
        "Picture": 0
    }
}

```

Or

The server searches by channel:

```

{
    "operator": "SearchControl",
    "info": {
        "DeviceID": 1300122,
        "BeginTime": "2018-11-13T00:00:00",
        "EndTime": "2018-11-13T23:59:59",
        "Channel": 1,
        "Picture": 0
    }
}

```

.....

Parameter information returned:

| Key | Type | Values | Description |
|------------|-------------|--|--|
| operator | char | SearchControl | SearchControl: Query control records according to conditions |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| TotalNum | int | 0~100 | Returns the number of control records. By default, the maximum number of returned records is 100 |
| SearchInfo | | | Return to search results list |
| LibID | int | | The database ID of the control record |
| VerfyType | int | 1: Or 22 ~ 27 ~ 27 ~ 3 or 22 ~ 3;
2: Special machines:
Support mask detection or () operation, and 0x100 indicates passing with mask detection;
It supports temperature detection or () operation, and 0x200 indicates that it has temperature detection;
Support mask + body temperature detection or () operation. 0x300 indicates that the mask + body temperature detection is available;
For example:Mask + whitelist verification (0x101) | Validation type.
1: Whitelist verification
2: ID card verification
3: White list + ID card verification
21:RF card verification (built-in swipe card model)
22:RF card verification + whitelist verification (built-in swipe card model)
24:Wegenka verification
25:Wegenka + whitelist verification
27:HTTP remote door opening |

| | | | |
|----------------|-------------------|--|---|
| | | Body temperature +
whitelist verification
(0x201)

Mask + body
temperature + Wigan
swipe card + white list
verification (0x319) | |
| Time | char | | Certification
passing time |
| VerifyStatus | char | 0~2 | Personnel access
status
0:None: 1Allow
2:refuse |
| Similarity | float | | Similarity |
| PersonType | int | | List type 0:White
list: 1blacklist |
| Name | char | | Name (no more than 32
bytes) |
| WGFacilityCode | int
(optional) | | Facility code;
when 3.2 door opening
conditions When
Wiegand = 4 or 5 or 6
or 7 in, together with
the mjcardno field,
the Wiegand number is
formed; when Wiegand
= 0 or 1, this
parameter has no
practical
significance. See 3.10
.5 Wigan access card
number and built-in
swipe ID card number |
| MjCardNo | unsigned int | | Weigan access card
number
(userid). When 3.2
door opening
conditions When |

| | | | |
|-------------|-----------------|-------|--|
| | | | Wiegand = 4 or 5 or 6 or 7 in, it is combined with wgfacility code field to form the weigenka number; when Wiegand = 0 or 1, it forms the weigenka number alone. See 3.10.5 Wigan access card number and built-in swipe ID card number |
| RFIDCard | Char (optional) | | ID card number, the maximum length is 18 characters, for the built-in card reader (including the end character). See 3.10.5 Wigan access card number and built-in swipe ID card number |
| Gender | int | 0~2 | Gender 0:Male 1:Female 2:All |
| Nation | int | | nation |
| IdCard | char | | ID card number |
| Birthday | char | | date of birth |
| Telnum | char | | phone number |
| Native | char | | Native place |
| Address | char | | address |
| CustomizeID | unsigned int | | User defined ID |
| PersonUUID | char | | User defined UUID |
| Temperature | double | 37.20 | Real time detection of face temperature, when 3.27 temperature parameters Only when facemask tptmode = |

| | | | |
|------------------|------|-----|---|
| | | | 1, 4, 5 mode is returned
(temperature detection machine version support) |
| TemperatureAlarm | int | 0~1 | Real time detection of whether the face temperature exceeds the threshold, 0: not exceeded; 1: over (temperature detection machine version support) |
| RegPicinfo | Char | | Base64 encoding of registered images |
| SnapPicinfo | Char | | Base64 encoding of captured images |

Returned body:

        "RegPicinfo": "...."
      }
    ]
  }
}
```

```
    }  
  ]  
}  
{
```

3.23 common configuration settings

Get or set common parameter configuration information.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|---------------------|----------------------|--|--|
| operator | char | SetGeneralParam
or
GetGeneralParam | Setgeneralparam:
setting common
configuration
parameters
Getgeneral: get common
parameters |
| DeviceID | int | | The ID of the device |
| info | json object | | concrete content |
| FaceThreshold | int
(optional) | 50 ~ 100 | Black and white list
comparison threshold |
| IDCardThresho
ld | int
(optional) | 50 ~ 100 | Threshold comparison ID
card |
| ControlType | int
(optional) | 0~2 | 0:Switch value: 1:
Wigan interface 26; 2:
Wigan interface 34 |
| LiveThreshold | double
(optional) | 0~1 | Live detection
threshold (not
settable) |
| LiveFrameNum | int
(optional) | | Number of consecutive
frames in vivo
detection (not
settable) |
| AutoRebootDay | int
(optional) | 0~8 | Device auto restart set
date
0:Do not restart; 1:
restart every day;
2~8:
Restart auto day 1 week |
| AutoRebootHou
r | int
(optional) | 0~23 | Device restart on time |

| | | | |
|-----------|--------------------|-----|--|
| Direction | int
(optional) | 0~2 | Entrance and exit
direction
0: one way
1: Entrance
2: Export |
| IPAddr | char
(optional) | | Device IP address (64
bytes) |
| Submask | char
(optional) | | Device subnet mask (32
bytes) |
| Gateway | char
(optional) | | Device gateway (32
bytes) |
| DNS | char
(optional) | | Device DNS (32 bytes) |
| DHCP | int
(optional) | 0~2 | |

3.23.1 obtaining common setting parameters

Operator: **GetGeneralParam**

URI: **http://<server ipaddr>/action/GetGeneralParam**

e. g. ,

http://172.168.2.10/action/GetGeneralParam

Reply to body:

```
{
  "operator": "GetGeneralParam",
  "DeviceID": 1379743,
  "info": {
    "FaceThreshold": 90,
    "IDCardThreshold": 50,
    "ControlType": 0,
    "AutoRebootDay": 0,
    "AutoRebootHour": 0,
    "Direction":0,
    "IPAddr": "172.168.2.93",
    "Submask": "255.255.255.0",
    "Gateway": "172.168.2.1",
    "DNS": "202.96.134.33"
```

```
}  
}
```

3.23.2 setting common parameters

Operator: SetGeneralParam

URI: http://<server ipaddr>/action/SetGeneralParam

e. g. ,

http://172.168.2.10/action/SetGeneralParam

Issue body:

```
{  
  "operator": "SetGeneralParam",  
  "DeviceID": 1305269,  
  "info": {  
    "FaceThreshold": 75,  
    "IDCardThreshold": 50,  
    "ControlType": 0,  
    "Direction": 0,  
    "AutoRebootDay": 0,  
    "AutoRebootHour": 0,  
    "IPAddr": "172.168.2.130",  
    "Submask": "255.255.255.0",  
    "Gateway": "172.168.2.1",  
    "DNS": "202.96.134.33"  
  }  
}
```

3.24 restart the device

Get or set common parameter configuration information.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------------|----------------|--------------|-----------------------------|
| operator | char | RebootDevice | RebootDevice:reboot device |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| IsRebootDevice | int (optional) | 0~1 | 0:Do not restart the device |

| | | | |
|--|--|--|-----------------|
| | | | 1:reboot device |
|--|--|--|-----------------|

Operator: RebootDevice

URI: http://<server ipaddr>/action/RebootDevice

e. g. ,

http://172.168.2.10/action/RebootDevice

body:

```
{
  "operator": "RebootDevice",
  "info": {
    "DeviceID": 1305269,
    "IsRebootDevice": 1
  }
}
```

3.25 image service function

Image service functions include: image similarity comparison, local face database search, face detection and panoramic image acquisition.

3.25.1 picture comparison similarity

Operator: GetPictureSimilarity

URI:http://<server ipaddr>/action/GetPictureSimilarity

e. g. ,

http://192.168.2.10/action/GetPictureSimilarity

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------|----------------------|---|
| operator | char | GetPictureSimilarity | Get the similarity of personnel pictures |
| picinfo1 | char | | Base64 encoded data of face image (no more than 1m) |
| picinfo2 | char | | Base64 encoded data of face image (no more than |

| | | | |
|--|--|--|-----|
| | | | 1m) |
|--|--|--|-----|

```
{
  "operator": "GetPictureSimilarity",
  "picinfo1": "data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB.....",
  "picinfo2": "data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB....."
}
```

Reply to the correct body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|------------|-------------|----------------------|--|
| operator | char | GetPictureSimilarity | Get the similarity of personnel pictures |
| info | json object | | concrete content |
| Similarity | float | | Face image similarity |

```
{
  "operator": "GetPictureSimilarity",
  "info": {
    "Similarity": 80
  }
}
```

3.25.2 search local face database by graph

Operator: GetPictureSearch

URI: <http://<server ipaddr>/action/GetPictureSearch>

e. g. ,

<http://192.168.2.10/action/GetPictureSearch>

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|------|------------------|-------------------------------------|
| operator | char | GetPictureSearch | Search local face database by graph |

| | | | |
|---------------|-------------|--|---|
| info | json object | | concrete content |
| MaxSimilarity | float | | Similarity threshold |
| MaxNum | int | | Maximum number |
| picinfo | char | | Base64 encoded data of face image (no more than 1m) |

```
{
  "operator": "GetPictureSearch",
  "info": {
    "MaxSimilarity":80,
    "MaxNum":5
  },
  "picinfo":"data:image/jpeg;base64,/9j/4AAQSkZJRgABAQAAQAB....."
}
```

Reply to the correct body

Parameter information: personnel information + personnel information + personnel information + personnel information

(the detailed description of the field can be referred to [3.10 addition, editing and modification of the list](#))

| Key | Type | Values | Description |
|------------|--------------|------------------|--|
| operator | char | GetPictureSearch | Get the information and pictures that meet the requirements of face images |
| info | json object | | concrete content |
| TotalNum | int | | The total number of lists returned by search results |
| SearchInfo | | | List of returned lists |
| Uid | unsigned int | | ID database |
| Type | int | 0~1 | List type 0: White list: 1 blacklist |

| | | | |
|-------------|--------------|--|--|
| Name | char | | Name (no more than 64 bytes) |
| Cardtype | int | | Enter card number type |
| MjCardNo | unsigned int | | Access card number |
| Sex | int | | Gender |
| Nation | int | | nation |
| Certype | int | | Document type |
| Cernumber | char | | ID card number (no more than 32 bytes) |
| Birth | char | | date of birth |
| Phone | char | | phone number |
| Place | char | | Native place (no more than 32 bytes) |
| Addr | char | | Address (no more than 72 bytes) |
| Notes | char | | Remarks (no more than 64 bytes) |
| Filetype | int | | file type |
| Fileindex | unsigned int | | Document No |
| Filepos | unsigned int | | position |
| CustomizeID | unsigned int | | The ID number of the user can be modified by the user ID number. Note: you can't use the same ID to add personnel repeatedly, otherwise it will cause errors in modification, deletion and other operations. |
| PersonUUID | char | | The user-defined personnel UUID |

| | | | |
|------|------|--|---|
| | | | number (no more than 48 bytes) can be modified and deleted through this ID number to manage the corresponding personnel information. Note: the same UUID cannot be used repeatedly to add personnel, otherwise it will cause errors in modification, deletion and other operations. |
| Time | char | | Creation time |

```

{
  "operator": "GetPictureSearch",

        "Time": "2018-03-12/09:09:20"
    }
]
}
}

```

3.25.3 face detection

Operator: DetectFaceFromPic

URI: <http://<server ipaddr>/action/DetectFaceFromPic>

e. g. ,

<http://192.168.2.10/action/DetectFaceFromPic>

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|-------------------|---|
| operator | char | DetectFaceFromPic | Face detection |
| info | json object | | concrete content |
| picinfo | char | | Base64 encoded data of face image (no more than 1m) |

```

{
    "operator": "DetectFaceFromPic",
    "info": {
    },
    "picinfo": "data:image/jpeg;base64, /9j/4AAQSkZJRgABAQAAQAB....."
}

```

Reply to the correct body

Parameter information: whether face is detected

| Key | Type | Values | Description |
|------------|-------------|-------------------|--|
| operator | char | DetectFaceFromPic | Face detection |
| info | json object | | concrete content |
| DetectFace | int | 0~1 | Face detection results:
0: no face was detected
1: Face detected |

```
{
  "operator": "DetectFaceFromPic",
  "info": {
    "DetectFace":1,
  }
}
```

3.25.4 manual capture

The manual capture interface is only supported in special version (the beginning version of V14). This interface supports the acquisition of panoramic images of devices or the return of face images.

Operator: **FrontalFaceSnap**

URI:**http://<server ipaddr>/action/FrontalFaceSnap**

e. g. ,

http://192.168.2.10/action/FrontalFaceSnap

Issued body

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|-----------------|-----------------------------------|
| operator | char | FrontalFaceSnap | Capture panorama |
| info | json object | | concrete content |
| DeviceID | int | | Device ID |
| Overall | int | 0~1 | Picture type
0: get face image |

| | | | |
|--|--|--|---|
| | | | (return for timeout if failed)
1: Capture panorama |
| | | | |

```
{
  "operator": "FrontalFaceSnap",
  "info": {
    "DeviceID": 1300001,
    "Overall":1
  }
}
```

Reply to the correct body

Parameter information:

| Key | Type | Values | Description |
|----------|------|-----------------|--|
| operator | char | FrontalFaceSnap | Manual capture |
| FacePic | char | | Base64 encoding data of the image (no more than 1.5m), return data |

```
{
  "operator": "FrontalFaceSnap",
  "info": {
    "FacePic": "data:image/jpeg;base64, /9j/4AAQSkZJRgABAQAAQAB....."
  }
}
```

3.26 capture record query

The snapshot record query is about the stranger snapshot record query, if it is the personnel information of the pass comparison, it is not stored in the capture record; the snapshot record query mainly includes the total number of snapshot records query and the snapshot record information

query.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|--------------|-------------------|---|---|
| operator | char | SearchCaptureNum
or
SearchCapture | SearchCaptureNum: Query the total number of snapshot records according to the conditions
SearchCapture: Query snapshot records according to conditions |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| BeginTime | char | | Search start time, required |
| EndTime | char | | Search end time, required |
| Ascending | int
(optional) | 0 ~ 1 (default 0) | Search results in ascending or descending order
0: ascending (results move backward from search start time)
1: Descending (results move forward from search end time) |
| BeginNO | int
(optional) | | Return the starting sequence number. If it is not set, it will start from 0 by default |
| RequestCount | int
(optional) | 0~100 | The maximum number of returned records is |

| | | | |
|--|--|--|---|
| | | | 100. If it is not set, the maximum number of returned records is 15 |
|--|--|--|---|

3.26.1 query of total number of snapshot records

Query the total number of snapshot records according to the time condition.

Operator: SearchCaptureNum

URI: <http://<server ipaddr>/action/SearchCaptureNum>

<http://192.168.2.10/action/SearchCaptureNum>

Issued body

```
{
  "operator": "SearchCaptureNum",
  "info": {
    "DeviceID": 1305433,
    "BeginTime": "2020-01-01T00:00:00",
    "EndTime": "2020-12-13T23:09:00"
  }
}
```

Parameter information returned:

| Key | Type | Values | Description |
|----------|------|------------------|--|
| operator | char | SearchCaptureNum | SearchCaptureNum:Query the total number of snapshot records according to the |

| | | | |
|------------|-------------|--|--|
| | | | conditions |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| CaptureNum | int | | Returns the total number of snapshot records by time condition |

Returned body:

```
The total number of snapshot records returned according to the condition

{
    "operator": "SearchCaptureNum",
    "info": {
        "DeviceID": 1305433,
        "CaptureNum": 485
    }
}
```

3.26.2 personnel information query of capture record

Query and query the personnel information of snapshot record according to the conditions.

| Key | Type | Values | Description |
|------------|-------------|---------------|---|
| operator | char | SearchCapture | SearchCapture: Query snapshot records according to conditions |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| CaptureNum | int | | Returns the total number of snapshot records by time |

| | | | |
|------------------|-------------------|---------------------|---|
| | | | condition |
| Listnum | int
(optional) | | The number of personnel information of snapshot records returned by condition query |
| LibSnapID | int
(optional) | | The snapshot library ID of the returned snapshot record information |
| CreateTime | Char | YYYY-MM-DDThh:mm:ss | Capture time |
| Temperature | double | 37.20 | Real time detection of face temperature, when 3.27 temperature parameters Only when facemask tptmode = 1,4,5 mode is returned (temperature detection machine version support) |
| TemperatureAlarm | int | 0~1 | Real time detection of whether the face temperature exceeds the threshold, 0: not exceeded; 1: over (temperature detection machine version support) |
| SnapPicinfo | Char | | Base64 encoding of captured images |

Operator: SearchCapture

URI: <http://<server ipaddr>/action/SearchCapture>

`http://192.168.2.10/action/SearchCapture`

Issued body

e. g. ,

http://<server ipaddr>/action/SearchCapture

Body:

Search by time:

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "BeginTime": "2020-01-13T00:00:00",
    "EndTime": "2020-01-13T23:59:59"
  }
}
```

Or

Limit the number of snapshot records returned:

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "BeginTime": "2020-01-01T00:00:00",
    "EndTime": "2020-01-13T23:59:59",
    "RequestCount": 10
  }
}
```

Or

Limit the number of snapshot records returned and the starting position:

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "BeginTime": "2020-01-01T00:00:00",
    "EndTime": "2020-01-13T23:59:59",
    "BeginNO": 5,
    "RequestCount": 10
  }
}
```

```
}
```

Returned body:

According to the time conditions, return the capture record personnel information results:

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "Listnum": 15,
    "List": [
      {
        "LibSnapID": 3303,
        "CreateTime": "2020-01-13T20:02:43",
        "SnapPicinfo": "data:image/jpeg;base64,Qk3m5....."
      },
      {
        "LibSnapID": 3302,
        "CreateTime": "2020-01-13T19:36:06",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225QA....."
      },
      {
        "LibSnapID": 3301,
        "CreateTime": "2020-01-13T18:34:15",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225....."
      },
      .....
      {
        "LibSnapID": 3289,
        "CreateTime": "2020-01-13T16:31:26",
        "SnapPicinfo": "data:image/jpeg;base64,Qk22....."
      }
    ]
  }
}
```

```
}
```

Or

The number of snapshot records returned is limited to 10

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "Listnum": 10,
    "List": [
      {
        "LibSnapID": 3303,
        "CreateTime": "2020-01-13T20:02:43",
        "SnapPicinfo": "data:image/jpeg;base64,Qk3m5....."
      },
      {
        "LibSnapID": 3302,
        "CreateTime": "2020-01-13T19:36:06",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225QA....."
      },
      {
        "LibSnapID": 3301,
        "CreateTime": "2020-01-13T18:34:15",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225....."
      },
      .....
      {
        "LibSnapID": 3294,
        "CreateTime": "2020-01-13T16:31:38",
        "SnapPicinfo": "data:image/jpeg;base64,Qk22....."
      }
    ]
  }
}
```

Or

Limit the number of returned snapshot records to 10 and start position:

```
{
  "operator": "SearchCapture",
  "info": {
    "DeviceID": 1305433,
    "Listnum": 10,
    "List": [
      {
        "LibSnapID": 3298,
        "CreateTime": "2020-01-13T14:32:38",
        "SnapPicinfo": "data:image/jpeg;base64,Qk3m5....."
      },
      {
        "LibSnapID": 3397,
        "CreateTime": "2020-01-13T14:32:36",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225QA....."
      },
      {
        "LibSnapID": 3396,
        "CreateTime": "2020-01-13T14:32:34",
        "SnapPicinfo": "data:image/jpeg;base64,Qk225....."
      },
      .....
      {
        "LibSnapID": 3289,
        "CreateTime": "2020-01-13T16:31:26",
        "SnapPicinfo": "data:image/jpeg;base64,Qk22....."
      }
    ]
  }
}
```

3.27 temperature parameters

The temperature parameter is mainly related to the temperature operation parameters of the face recognition all-in-one machine which supports the temperature detection.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|---------------------|----------------------|---|--|
| operator | char | GetTemperature
or
SetTemperature | GetTemperature:Get
temperature parameters
SetTemperature:Setting
temperature parameters |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| TemperatureMode | int
(optional) | 0~1 | Temperature display mode
0: centigrade
temperature
1:fahrenheit |
| ShowAbnormalTemp | int
(optional) | 0~1 | Display abnormal
temperature
Do not display 0:
1:display |
| TemperatureCheck | double
(optional) | 0.0 | Temperature calibration |
| TemperatureLow | double
(optional) | 34.00 (default
for clause C);
28.00 (default
except for
clause C) | Low temperature
threshold |
| TemperatureHigh | double | 37.3 | Temperature alarm
threshold (default:
37.3) |
| EnvTemperature | double
(optional) | | Ambient temperature
(reserved) |
| EnvTemperatureCheck | double
(optional) | | Ambient temperature
calibration value |

| | | | |
|--------------|-------------------|---------|--|
| | | | (reserved) |
| OpenLaser | int
(optional) | 0~1 | Switch on (laser reserved or not) |
| TempFaceMinW | int
(optional) | 100~500 | The minimum face recognition pixel width of temperature measurement; the lower the temperature measurement distance, the farther the temperature measurement recognition distance is (default 350) |
| TempFaceMinH | int
(optional) | 50~1000 | The larger the height, the smaller the recognition area |

3.27.1 obtaining temperature parameters

Operator: GetTemperature

URI: `http://<server ipaddr>/action/GetTemperature`

e. g. ,

`http://192.168.2.10/action/GetTemperature`

Reply to body

```
{
  "operator": "GetTemperature",
  "info": {
    "TemperatureMode": 0,
    "ShowAbnormalTemp": 0,
    "TemperatureCheck": 0.00,
  }
}
```

```

        "TemperatureLow": 28.00,
        "TemperatureHigh": 37.30,
        "EnvTemperature": 0.00,
        "EnvTemperatureCheck": 0.00,
        "OpenLaser": 0,
        "TempFaceMinW": 350,
        "TempFaceMinH": 560
    }
}

```

3.27.2 setting temperature parameters

Operator: **SetTemperature**

URI: **http://<server ipaddr>/action/SetTemperature**

e. g. ,

http://192.168.2.10/action/SetTemperature

Issue body

```

{
  "operator": "SetTemperature",
  "info": {
    "DeviceID": 1305433,
    "TemperatureMode": 0,
    "ShowAbnormalTemp": 0,
    "TemperatureCheck": 0.00,
    "TemperatureLow": 28.00,
    "TemperatureHigh": 37.30,
    "EnvTemperature": 0.00,
    "EnvTemperatureCheck": 0.00,
    "OpenLaser": 0,
    "TempFaceMinW": 350,
    "TempFaceMinH": 560
  }
}

```

```

}
}

```

3.28 handshake protocol data

Handshake protocol data is mainly related to the client docking platform, which can write some data content to the face recognition all-in-one machine for saving. Generally, it is the third-party encrypted data content or the third-party authentication data, and the size of the data content cannot exceed 4K bytes.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|---------------|-------------|--|--|
| operator | char | GetHandSharkData
or
SetHandSharkData | GetHandSharkData: Get handshake protocol data
SetHandSharkData: Set handshake protocol data |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| HandSharkInfo | char | | Data content, no more than 4K bytes |

3.28.1 obtaining handshake protocol data

Operator: **GetHandSharkData**

URI: **http://<server ipaddr>/action/GetHandSharkData**

e. g. ,

http://192.168.2.10/action/GetHandSharkData

Reply body

```
{
  "operator": "GetHandSharkData",
  "info": {
    "HandSharkInfo": "xxxx"
  }
}
```

3.28.2 setting handshake protocol data

Operator: **SetHandSharkData**

URI: **http://<server ipaddr>/action/SetHandSharkData**

e. g. ,

http://192.168.2.10/action/SetHandSharkData

Issued body

```
{
  "operator": "SetHandSharkData",
  "info": {
    "DeviceID": "1310001",
    "HandSharkInfo": "xxxx"
  }
}
```

Version 3.29 upgrade

stay[3.9 equipment information](#)The software version of the current all-in-one face recognition machine can be obtained. Check that the version to be upgraded and the current software version of the all-in-one face recognition machine are in line with the corresponding version. After the upgrade version is successful, the all-in-one face recognition machine will restart automatically.

3.29.1 version upgrade interface 1

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|-------------|--|---|
| operator | char | Upgrade | Upgrade:Version upgrade |
| info | json object | | concrete content |
| DeviceID | int | | The ID of the device |
| Name | char | | Version name |
| Path | char | For example:
https://hq.oss-cn-shenzhen.aliyuncs.com/face/xxx.swx | The download path (HTTP or HTTPS) of the version upgrade file must be ". SWX" |

Operator: Upgrade

URI:http://<server ipaddr>/action/Upgrade

e. g. ,

http://192.168.2.10/action/Upgrade

Issued body

```
{
  "operator": "Upgrade",
  "info": {
    "DeviceID": 1300001,
    "Name": "latest version",
```

```

    "Path": "https://hq.oss-cn-shenzhen.aliyuncs.com/face/xxx.swx"
  }
}

```

3.30 system parameters

The system parameters are mainly related to the operation parameters of the face recognition all-in-one machine.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------------|-------------------|-------------------------|---|
| operator | | GetSysCfg/
SetSysCfg | GetSysCfg: Get system parameters
SetSysCfg: Setting system parameters |
| info | | | concrete content |
| Language | int
(optional) | 0~5 | Device language, 0: English
1: Simplified Chinese 2:
Chinese traditional 3:
Portuguese 4: Korean 5:
Russian (special version
support), 6: Italian, 7:
French, 8: Spanish, 9:
Japanese; if the device
language is changed, the
machine will restart |
| DataBaseEnable | int
(optional) | 0~1 | Record snapshot + record ID
card + record authentication
(0 No, 1 yes); default: 1, if
it is not enabled, snapshot,
ID card and authentication
image data will not be saved |
| IDcardType | int
(optional) | 0~3 | ID card reader type,
0: Central control (idm30),
Tengyan, Huashi (cvr-100b),
Boya;
1: Idr210 was used as the
control;
2: Central control (idm30,
idm10);
3: Huashi (cvr-100uc) |

| | | | |
|-------------------|----------------------|----------------------------|--|
| CardReaderType | int
(optional) | reserve | IC card reader type |
| CardOpenDoorWay | int
(optional) | reserve | Card opening mode
0: face + card 1: face or card |
| FaceDisplay | int
(optional) | 0 ~ 1, the
default is 1 | Whether to display face
frame
0:No 1:yes |
| LiveDetectType | int
(optional) | 0 ~ 2, default
1 | In vivo detection mode 0:
Live detection is always on,
1: turn it off, 2: turn it on
according to the time period |
| LiveDetectTimeBeg | String
(optional) | e. g. , 07:00:00 | Start time point of live
detection every day
Required when
livedetecttype = 2 |
| LiveDetectTimeEnd | String
(optional) | e. g. , 19:00:00 | The end time of living body
test every day
Required when
livedetecttype = 2 |
| LiveThreshold | Double
(optional) | e. g. , 90.00000
0 | Live detection threshold
(not settable) |
| LiveFrameNum | int
(optional) | | The number of consecutive
frames in vivo detection,
the larger the number of
frames, the longer the
recognition time (can not be
set) |
| LedLightType | int
(optional) | 0~5 | Enable white light type 0:
never 1: time control 2:
photosensitive control 3:
face sensing 4: face or time
5 face or light perception |
| LedBrightness | int
(optional) | | Use when white light is
enabled |
| LedTimeBeg | String
(optional) | e. g. , 19:00:00 | Start time of white light
activation every day (white
light activation time),
which is required when
ledlighttype = 1, 4 |
| LedTimeEnd | String
(optional) | e. g. , 07:00:00 | The end time of white light
activation (turn off white
light time) is required when |

| | | | |
|----------------------|-------------------|------------------|--|
| | | | ledlighttype = 1,4 |
| LedDisableAfterSec | int
(optional) | | Turn off the white light (face sensing) after a few seconds. Required when ledlighttype = 3,4,5 |
| LcdBLDisable | int
(optional) | | Do you want to turn off the screen when there is no one
Never, 1: turn off the backlight when no face is detected |
| LcdBLDisableAfterSec | int
(optional) | | When lcdbldisable = 1, it is required to close the screen in seconds |
| ScreenBrightness | int
(optional) | Default:50 | Screen brightness (reserved) |
| WebTimeOut | int
(optional) | 2 ~ 10 default:5 | Web page login timeout (minutes) |

3.30.1 obtaining system parameters

Operator: **GetSysCfg**

URI: **http://<server ipaddr>/action/GetSysCfg**

e. g. ,

http://192.168.2.10/action/GetSysCfg

Reply to body

  }
}
```

3.30.2 setting system parameters

Operator: SetSysCfg

URI: <http://<server ipaddr>/action/SetSysCfg>

e. g. ,

<http://192.168.2.10/action/SetSysCfg>

Issue body

```
{
  "operator": "SetSysCfg",
  "info": {
    "LedLightType": 4,
    "LedTimeBeg": "19:00:00",
    "LedTimeEnd": "06:00:00",
    "ScreenBrightness": 50,
    "WebTimeOut": 10
  }
}
```

3.31 mqtt parameters

The mqtt parameters are mainly related to the mqtt service running parameters of the face recognition all-in-one machine. Setting the important parameters of this interface will make the face recognition all-in-one machine and the mqtt server reconnected.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|--------------------|----------------------|-------------------------------|--|
| operator | | GetMQTTParam/
SetMQTTParam | GetMQTTParam:Get mqtt parameters
SetMQTTParam:Setting mqtt parameters |
| info | | | concrete content |
| MQEnable | int
(optional) | 0~1 | Turn mqtt service on / off
0: close
1: Open |
| MQCloudID | String
(optional) | | Mqtt gate cloud ID number
Recommended native ID
(1300001) |
| MQAddr | String
(optional) | | Mqtt cloud address |
| MQPort | int
(optional) | | Mqtt cloud port |
| MQUser | String
(optional) | | Mqtt cloud user name |
| MQPwd | String
(optional) | | Mqtt cloud password |
| MQTopic | String
(optional) | | Mqtt cloud topic |
| StrangerUploadType | int
(optional) | 0~1 | Upload the snapshot information of strangers
(default: 0)
0: Upload
1: Do not upload |
| RecordUploadType | int
(optional) | 0~2 | Default information upload
(1)
0:Do not upload
1:Identification record upload with captured pictures
2:Upload image without identification |
| Direction | int | 0~2 | Import and export direction |

| | | | |
|--------------------------|----------------------|-------------------------|---|
| | (optional) | | of all in one machine
0:Imported
1:exit
2:No direction |
| QRCode | int
(optional) | 0~1 | Default: QR code scanning
result
0: do not upload
1: Upload |
| ResumefromBreak
point | int
(optional) | 0~1 | Whether the breakpoint
continuous transmission of
mqtt stranger snapshot
information and
identification record is
enabled (in the mode of
stranger snapshot upload or
identification record
upload), 0: not enabled, 1:
enabled. It does not enable
the breakpoint continuous
transmission function, only
ensures the push data, and
does not need the platform
(cloud server) to
return. 7.7. For the details,
please refer to the mqtt
authentication function,
After 10 seconds, if the
all-in-one machine does not
receive the correct data
packet from the server, it
will continue to push this
message. |
| BeginTime | String
(optional) | YYYY-MM-DDThh
:mm:ss | The default start time of
mqtt breakpoint
continuation can be left
blank. The default time is to
set the time for stranger
snapshot upload or
identification record
upload and enable breakpoint
continuous transmission
function. When the stranger
snapshot and authentication
record information push |

| | | | |
|--|--|--|--|
| | | | before the breakpoint is completed, this time will become the time to complete the breakpoint continuous transmission and push. e.g.,
2020-05-25T09:10:00 |
|--|--|--|--|

3.31.1 getting mqtt parameters

Operator: GetMQTTParam

URI: http://<server ipaddr>/action/GetMQTTParam

e.g.,

http://192.168.2.10/action/GetMQTTParam

Reply to body

```
{
  "operator": "GetMQTTParam",
  "info": {
    "MQEnable": 1,
    "MQAddr": "172.168.2.89",
    "MQPort": 61613,
    "MQUser": "admin",
    "MQPwd": "password",
    "MQTopic": "mqtt/face/1306612",
    "MQCloudID": "1306612",
    "StrangerUploadType": 1,
    "RecordUploadType": 0,
    "Direction": 0,
    "QRCode": 0,
    "ResumefromBreakpoint": 0,
    "BeginTime": "2020-05-20T16:34:28"
  }
}
```

3.31.2 setting mqtt parameters

Operator: SetMQTTParam

URI:http://<server ipaddr>/action/SetMQTTParam

e. g. ,

http://192.168.2.10/action/SetMQTTParam

Issue body

```
{
  "operator": "SetMQTTParam",
  "info": {
    "StrangerUploadType": 0,
    "RecordUploadType": 1
  }
}
```

3.32 manual push control record

Manual push control record interface is mainly to solve the problem of HTTP server[3.12.4 reporting of certification results](#)If the control record reported by the interface is lost, the all-in-one machine will upload the authentication results within the time period to the server by manual setting again.This interface requires[3.12 data subscription](#)Part of the subscription address and port settings are correct, and authentication result reporting subscription is enabled.This interface is a control record that is forced to be pushed and searched. No matter whether or not the network interruption and continuous transmission mode is adopted, the control record uploaded by this interface does not need the server's reply. At the same time, it should be noted that the data reported by this interface may be saved for multiple times because the same record has been reported to the server before.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|----------|--------|---------------------|---|
| operator | | ManualPushRecords | ManualPushRecords:Manual push control record |
| info | | | concrete content |
| DeviceID | int | | Device ID |
| TimeS | string | YYYY-MM-DDThh:mm:ss | Start time of control record to be pushed. e. g. ,
2020-07-29T21:50:05 |
| TimeE | string | YYYY-MM-DDThh:mm:ss | The end time of the control record to be pushed. e. g. , |

| | | | |
|-----------|----------------------|--|--|
| | | | 2020-07-29T21:50:05 |
| Name | string
(optional) | | Control record matching
exact name (reserved) |
| RecordNum | int
(optional) | | Total number of control
records matched (return
value), 0: no matching data
was found |

3.32.1 setting manual push control record

Operator: ManualPushRecords

URI: `http://<server ipaddr>/action/ManualPushRecords`

e.g.,

`http://192.168.2.10/action/ManualPushRecords`

Issue body

```
{
  "operator": "ManualPushRecords",
  "info": {
    "DeviceID": 1326491,
    "TimeS": "2020-07-28T9:00:00",
    "TimeE": "2020-08-07T9:00:00"
  }
}
```

Reply to body

```
{
  "operator": "ManualPushRecords",
  "code": 200,
  "info": {
    "Result": "Ok",
    "RecordNum": "8",
    "Confirm connection to HTTP server is Ok ? Find 8 rec"
  }
}
```

```
ords, try to push now"
}
}
```

3.33 WiFi parameters

WiFi parameters mainly involve the WiFi parameter setting of the device, which needs to be coordinated [3.4 network parameters](#). The default route in is used. Only the device model and version that supports WiFi models have this parameter.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|--------------|--------------------|--------------------------------|--|
| operator | char | GetNetWiFi
or
SetNetWiFi | GetNetWiFi: Get WiFi parameters
SetNetWiFi: Setting WiFi parameters |
| info | json object | | concrete content |
| Enable | int
(optional) | | WiFi enabled
0: not enabled
1: Enable |
| WorkMode | int | Default: 0 | Working mode
0:Sta mode |
| SecurityMode | int | 0~2 | safe mode
0: no encryption
1: WPA-PSK/WPA2-PSK
2: WPA/WPA2 |
| SSID | String | | SSID (up to 32 bytes) |
| PassWord | String | | Password (up to 128 bytes) |
| DHCP | int | 0~1 | DHCP enabled
0: not enabled
1: Enable |
| IPAddr | char
(optional) | | Device IP address
(maximum 16 bytes), |

| | | | |
|---------|--------------------|--|--|
| | | | required when DHCP = 0 |
| NetMask | char
(optional) | | Device IP subnet mask
(maximum 16 bytes),
required when DHCP = 0 |
| GateWay | char
(optional) | | Device IP gateway
(maximum 16 bytes),
required when DHCP = 0 |
| DNS1 | char
(optional) | | DNS1 |
| DNS2 | char
(optional) | | DNS2 |

3.33.1 getting WiFi parameters

Operator: **GetNetWiFi**

URI: `http://<server ipaddr>/action/GetNetWiFi`

e. g. ,

`http://192.168.2.10/action/GetNetWiFi`

Reply body

```
{
  "operator": "GetNetWiFi",
  "info": {
    "Enable": 1,
    "WorkMode": 0,
    "DHCP": 1,
    "SecurityMode": 1,
    "SSID": "TP-LINK_4755",
    "PassWord": "testpassword",
    "IPAddr": "192.168.1.104",
    "NetMask": "255.255.255.0",
    "GateWay": "0.0.0.0",
    "DNS1": "202.96.134.33",
    "DNS2": "202.96.134.33"
  }
}
```

```
}  
}
```

3.33.2 setting WiFi parameters

Operator: SetNetWiFi

URI: `http://<server ipaddr>/action/SetNetWiFi`

e. g. ,

`http://192.168.2.10/action/SetNetWiFi`

Issued body

```
{  
  "operator": "SetNetWiFi",  
  "info": {  
    "Enable": 1,  
    "WorkMode": 0,  
    "DHCP": 1,  
    "SecurityMode": 1,  
    "SSID": "TP-LINK_4755",  
    "PassWord": "testpassword",  
    "IPAddr": "192.168.1.119",  
    "NetMask": "255.255.255.0",  
    "GateWay": "192.168.1.0",  
    "DNS1": "202.96.134.33",  
    "DNS2": "202.96.134.33"  
  }  
}
```

3.34 face recognition parameters

Face recognition parameters are mainly related to the recognition parameters of face recognition all-in-one machine. The recognition distance (corresponding to the minimum face pixel) can be modified through the interface. The X and Y values of the face detection area represent the starting position of the video picture detection area, and the width and height of the face detection area represent the width and height of the video picture detected based on X

and y. The width and height of face detection need to match the X and Y values of the face detection area. When $x > 0$, the face detection width should be less than (maximum face detection width - x). Generally, only the recognition distance (corresponding to the minimum pixel of face) needs to be changed, and other parameters do not need to be changed again.

Parameter information (Note: optional is optional)

| Key | Type | Values | Description |
|--------------|------|------------------------------------|--|
| operator | char | GetFaceParam
or
SetFaceParam | GetFaceParam: Get face recognition parameters
SetFaceParam: Setting face recognition parameters |
| recDistance | Int | 30 ~ 200 (unit: cm) | Recognition distance (CM) |
| faceMinPixel | Int | 0~960 | Face minimum pixel (obsolete, use recognition distance instead) |
| detectArea_x | Int | 0 ~ 960 (default 0) | Start point of face detection area X (even number) |
| detectArea_y | Int | 0 ~ 1280 (default 0) | Y start point of face detection area (even number) |
| detectArea_w | Int | 0 ~ 960 (default 960) | Face detection area width (even) |
| detectArea_h | Int | 0 ~ 1280 (default 1280) | Face detection area height (even number) |

3.34.1 obtaining face recognition parameters

Operator: GetFaceParam

URI: `http://<server ipaddr>/action/GetFaceParam`

e. g. ,

`http://192.168.2.10/action/GetFaceParam`

Reply body

```
{
  "operator": "GetFaceParam",
  "info": {
    "recDistance": "200",
    "faceMinPixel": "122",
    "detectArea_x": 0,
```

```
        "detectArea_y": 0,  
        "detectArea_w": 960,  
        "detectArea_h": "1280"  
    }  
}
```

3.34.2 setting face recognition parameters

Operator: SetFaceParam

URI: http://<server_ipaddr>/action/SetFaceParam

e. g. ,

<http://192.168.2.10/action/SetFaceParam>

Issued body

```
{  
    "operator": "SetFaceParam",  
    "info": {  
        "recDistance": "100",  
        "detectArea_x": 0,  
        "detectArea_y": 0,  
        "detectArea_w": 960,  
        "detectArea_h": "1280"  
    }  
}
```

| 2018-06-26 | LiangSY | 1.4 | 1. Modify some parameters of relevant interface of face capture comparison server
2. Modify some parameters of the list search query interface
3. Increase 3.12.5 query subscribed information
43.20 door opening control |
| 2018-07-05 | XuLS | 1.5 | 1. Modification 3.2 door opening conditions , add door opening mode
2. Modification 3.10.2 list editing and modification 、 3.11. Deletion of list 、 3.19.1 single list query 、 3.19.3 multiple list queries To increase the operation mode of libid of equipment database |
| 2018-07-05 | ChenCH | 1.5 | 1. Increase Appendix C:Specific functions of packet capture interface |
| 2018-07-09 | XuLS | 1.6 | 1. Modify 3.1 sound settings |
| 2018-07-11 | WangXY | 1.7 | 1. Modification 3.19.1 single list query 、 3.19.3 multiple list queries The UUID field is added to the reply message
2. modify 3.10.1 single list addition 、 3.10.2 list editing and modification 、 3.11. Deletion of list The UUID field is added by sending information
3. modify 3.12 data subscription , add the value type of topics to control the picture information transmission of subscription |

| | | | |
|------------|---------|-----|---|
| 2018-07-16 | WangXY | 1.7 | <ol style="list-style-type: none"> 1. modify3.12 data subscription, add QR code subscription function 2. increase3.12.5 QR code reporting 3. modify3.13 unsubscribe, add QR code unsubscribe function 4. modify3.12.6 query subscribed messages, add the value type of topics, control the picture information transmission and QR code subscription query |
| 2018-07-31 | XuLS | 1.7 | <ol style="list-style-type: none"> 1. modify3.2 door opening conditions, add the open door mode field: opendoorway to control the door opening mode 2. modify3.10 addition, editing and modification of the list, add the channel Authority x field of X channel (face multi-channel server) 3. modify3.12.4 reporting of certification results, add the personnel channel number accesschannel field (for face multi-channel server) 4. modify3.12.3 real time capture and report, add the picturetype field of the captured face image type |
| 2018-11-16 | LiangSY | 1.8 | <ol style="list-style-type: none"> 1. Add relevant parameters of personnel list for access control machine 2. Increase access control 3.21 password operation |
| 2018-11-19 | WangXY | 1.9 | <ol style="list-style-type: none"> 1. modify3.15 access camera parameters, using the form of JSON array instead of the original subscript representation 2. modify3.17 personnel type parameters, using the form of JSON array instead of the original subscript representation 3. increase3.22 control record query |

| | | | |
|------------|--------|------|---|
| 2019-01-21 | WangXY | 1.10 | <p>1. Modification3.12.1 push information does not require authentication、3.12.2 user name and password shall be provided during subscription, and authentication is required for submissionAdd the subscription of swiping card authentication and password authentication for access control machine</p> <p>2. 3.12.6 query the subscribed information and modify it to3.12.7 query subscribed informationAnd add the access control card authentication and password cancel authentication subscription</p> <p>3. Increase3.12.6 report of IC card number certification results (access control)and3.12.7 report of password authentication results (access control machine)</p> |
| 2019-03-8 | LaiWS | 1.11 | <p>1. Use optional to indicate which fields are optional. If optional is not indicated in the distribution information, it is required</p> <p>2. The type of info field is changed from char to JSON object, and other non-standard types are corrected. The length of some string types is explained below</p> <p>3. increase3.23.1 obtaining common setting parametersand3.23.2 setting common parameters</p> <p>4. modify3.15 access camera parametersChange the coninfo field of the body issued in and reply to the IPC field in the body_Info is consistent, 3.17 types of personnelThe coninfo field of the issued body is changed to be consistent with the field worktypeinfo in the reply body</p> |
| 2019-04-03 | LaiWS | 1.12 | 1. Increase 3.10.2 addition of multiple lists |
| 2019-09-10 | LaiWS | 1.13 | 1. Increase 3.24 restart the device |

| | | | |
|------------|---------|------|---|
| 2019-09-26 | CaiFF | 1.14 | <p>1. Modify 3.12.3 real time snapshot push to 3.12.3 strangers snapshot Report</p> <p>2. Modify 3.18.2 picture comparison similarity by 3.25.1 picture comparison similarity</p> <p>3. Modify 3.18.4 to search local face database as 3.25.2 search local face database by graph</p> <p>4. Modify 3.18.3 feature code comparison similarity to 3.18.2 feature code comparison similarity</p> <p>5. Modify 3.18.5 to obtain face image as 3.18.3 obtaining face images</p> <p>6. Increase 3.25.3 face detection</p> |
| 2019-10-22 | CaiFF | 1.15 | <p>1、3.10.1 single list addition 3.2 add more than 10 listsAdd image verification field</p> <p>2、3.10.1 single list addition 3.10.3 list editing and modification Return message to prompt modification</p> <p>3、3.19 list search queryAdd field description of effective times of temporary list 3</p> |
| 2019-11-05 | LaiWS | 1.16 | <p>1、3.12.6 reporting of ID card informationAdd ID card</p> |
| 2019-11-05 | CaiFF | 1.16 | <p>1、3.12 data subscriptionAdd breakpoint continuous transmission function</p> <p>2、3.12.1 push information does not require authentication 3.12.2 user name and password shall be provided during subscription, and authentication is required for submissionAdd breakpoint resume keyword</p> <p>3、3.12.3 strangers snapshot Report 3.12.4 reporting of certification resultsAdd sendintime to push keywords in time</p> <p>4、3.12.9 query subscribed informationAdd breakpoint resume and breakpoint resume time keyword return</p> |
| 2019-11-19 | LiangSY | 1.17 | <p>1. 3.12 data subscriptionIncrease the heartbeat interval setting for the subscription</p> |

| | | | |
|------------|--------|------|--|
| 2019-11-29 | CaiFF | 1.18 | 1. 3.10 addition, editing and modification of the list The distribution list image supports URI and is compatible with Base64 encoding
, and adding a URI to get an image example |
| 2019-12-04 | Chench | 1.19 | 1、 2.4 identity authentication Add postman authentication screenshot.
2. 3.20 door opening control Status controls whether to open the door or not; adds MSG field to prompt information; (compatible with previous door opening methods)
3. Modification and update Appendix C:Specific functions of packet capture interface Screenshot. |
| 2019-12-13 | CaiFF | 1.20 | 1. Modify 3.11 and delete the list as 3.11.1 deletion of single or multiple lists
2. increase 3.11.2 deletion of all personnel list |
| 2019-12-25 | CaiFF | 1.21 | 1. Modification 3.1 sound settings , add field
2. Modification 3.2 door opening conditions , add field
3. Modification 3.11.2 all personnel list deletion interface
4. Modification 3.12 data subscription , add field
5. 3.10 addition, editing and modification of the list , add different card number processing methods, and modify the example |
| 2019-12-28 | CaiFF | 1.21 | 1. Increase 3.10.5 Wigan access card number and built-in swipe ID card number |
| 2020-01-03 | CaiFF | 1.21 | 1. Modification 2.4 identity authentication explain |
| 2020-01-13 | CaiFF | 1.22 | 1. Increase 3.22.1 total number of control records query
2. Increase 3.26 capture record query |
| 2020-01-16 | CaiFF | 1.22 | 1. 3.22 control record query Add http remote door opening control record query return |

| | | | |
|------------|-------|------|---|
| 2020-02-18 | CaiFF | 1.22 | 1. 3.22.2 control record personnel information query and3.12.4 reporting of certification resultsAdd validation type
2. modify 3.11.1 deletion of single or multiple lists Description of totalnum field |
| 2020-02-29 | CaiFF | 1.22 | 1. 3.12.3 strangers snapshot Report Add fields such as temperature report
2. 3.12.4 reporting of certification results Add fields such as temperature report
3. Increase 3.27 temperature parameters |
| 2020-03-03 | CaiFF | 1.23 | 1. Modification 3.27 temperature parameters Mask temperature detection mode |
| 2020-03-07 | CaiFF | 1.24 | 1. Increase 3.27 temperature parameters Distance field
2. 3.22.2 control record personnel information query Add fields such as temperature
3. 3.26.2 personnel information query of capture record Add fields such as temperature |

| | | | |
|------------|-------|------|--|
| 2020-03-21 | CaiFF | 1.25 | 1. 3.22.2 control record personnel information query Modify validation type description
2. 3.12.4 reporting of certification results Modify validation type description
3. 3.2 door opening conditions Modify verification type description 4 3.27 temperature parameters Cancel facemask tptmode setting
5. Increase C. 12.4.1 reply the data packet with the server of network interruption and continuous transmission |
| 2020-05-07 | CaiFF | 1.26 | 1. Increase 3.28 handshake protocol data |
| 2020-05-08 | CaiFF | 1.27 | 1. increase Version 3.29 upgrade
2. 3.22 control record query and 3.26 capture record query Increase ascending / descending results return |
| 2020-05-14 | CaiFF | 1.27 | 1. modify 3.10.5 Wigan access card number and built-in swipe ID card number
2. increase 3.30 system parameters
Add RFID card mode to card 3 |
| 2020-05-25 | CaiFF | 1.27 | 1. Increase 3.31 mqtt parameters |
| 2020-05-28 | CaiFF | 1.28 | 1. Increase 3.2.3 introduction of door opening mode |
| 2020-06-09 | CaiFF | 1.28 | 1. Increase C. 10.1.1 add error code to single list |
| 2020-07-27 | CaiFF | 1.29 | 1. modify 3.1 sound settings , add the comparison success display field
2. modify 3.2 door opening conditions To increase the verification reset time
3. modify 3.27 temperature parameters
4. modify 3.23 common configuration settings , increase the direction of entrance and exit
5. modify 3.4 network parameters Add DHCP |
| 2020-07-29 | CaiFF | 1.30 | 1. Increase 3.32 manual push control record |
| 2020-09-26 | CaiFF | 1.31 | 1. Modification 3.19.2 total number of query lists , increase the maximum number of lists supported by the device |
| 2020-10-21 | CaiFF | 1.31 | 1. Modification 3.4 network parameters
2. Add appendix D D. 1 nation And modify the definition of nationality in the document
3. Modification 3.12.4 reporting of certification results , add push type |

| | | | |
|------------|-------|------|--|
| 2020-11-05 | CaiFF | 1.32 | 1. Modification 3.1 sound settings , add field
2. Modification 3.2 door opening conditions , add field
3. Increase Face recognition parameters |
| 2020-11-25 | CaiFF | 1.33 | 1. Increase 3.25.4 capture panorama |
| 2020-12-05 | CaiFF | 1.33 | 1. Modification 3.25.4 capture panorama by 3.25.4 manual capture |

Appendix B:Authentication failure or message reply of setting interface

B. 1 authentication failed

```
{
  "operator": "authentication",
  "info":{
    "Result": "Fail",
    "Detail": "Unsupport authentication protocol type"
  }
}
```

Or

```
{
  "operator": "authentication",
  "info":{
    "Result": "Fail",
    "Detail": "Unknown user or password"
  }
}
```

B. 2 set message reply

Set successfully:

```
{
  "operator": "<0perator>",
  "code": 200,
  "info":{
    "Result": "Ok"
```

```
}  
}
```

Setting failed:

```
{  
  "operator": "<operator>",  
  "info": {  
    "Result": "Fail",  
    "Detail": "<detail>"  
  }  
}
```

Appendix C: Specific functions of packet capture interface
